 This book is a comprehensive guide to radiopharmaceutical chemistry The stunning clinical successes of nuclear imaging and
 targeted radiotherapy have resulted in rapid growth in the field of radiopharmaceutical chemistry an essential component of
 nuclear medicine and radiology However at this point interest in the field outpaces the academic and educational
 infrastructure needed to train radiopharmaceutical chemists For example the vast majority of texts that address
 radiopharmaceutical chemistry do so only peripherally focusing instead on nuclear chemistry i e nuclear reactions in reactors
 heavy element radiochemistry i e the decomposition of radioactive waste or solely on the clinical applications of
 radiopharmaceuticals e g the use of PET tracers in oncology This text fills that gap by focusing on the chemistry of
 radiopharmaceuticals with key coverage of how that knowledge translates to the development of diagnostic and therapeutic
 radiopharmaceuticals for the clinic The text is divided into three overarching sections First Principles Radiochemistry and
 Special Topics The first is a general overview covering fundamental and broad issues like The Production of Radionuclides
 and Basics of Radiochemistry The second section is the main focus of the book In this section each chapter s author will delve
 much deeper into the subject matter covering both well established and state of the art techniques in radiopharmaceutical
 chemistry This section will be divided according to radionuclide and will include chapters on radiolabeling methods using all
 of the common nuclides employed in radiopharmaceuticals including four chapters on the ubiquitously used fluorine 18 and a
 Best of the Rest chapter to cover emerging radionuclides Finally the third section of the book is dedicated to special topics
 with important information for radiochemists including Bioconjugation Methods Click Chemistry in Radiochemistry and
 Radiochemical Instrumentation This is an ideal educational guide for nuclear medicine physicians radiologists and
 radiopharmaceutical chemists as well as residents and trainees in all of these areas **The Handy Chemistry Answer**
