

Energy in a Mass-Spring System 2

1. Two identical springs (spring constant 200 N/m) are suspended vertically with identical blocks on the ends (mass 2.0 kg each). The left spring is compressed 10 cm and released. From this position the system is slowly compressed until the spring constant is 10 N/m .

For this position, compressions, and mass were kept the same for the compressed position. Answer the following questions.

- (a) What is the spring constant when the left spring is slowly compressed to position B?

- (b) The blocks are then pulled to position C, held, and released. Position B is released and allowed to oscillate. The period of oscillation is 1.0 s . At the point where the system has kinetic energy, potential energy, and kinetic energy, what are the positions B, C, and D?

- (c) What is the spring constant when the block is released from position B?

- (d) Create a graph of energy vs. position for the system. The graph should be for the system, not for the spring. The graph should be for the system, not for the spring. The graph should be for the system, not for the spring.
