Blankson,2013-12-07 PAPERBACK In his 10th book on post relativity philosophy of time the Ghanaian philosopher argues that all the theories we read about time are useful only for constructing clocks to accord accurately with the earth s regular motions and astronomical features The many bemusing technical terms employed like duration between events sidereal time solar time nutation equinox earth s rotation the precession of the equinoxes etc were all invented to account for fixed general and absolute time running all through the cosmos and the same everywhere This view of time however was abolished by Einstein He adds that everything we have ever used to reckon time including atomic time amounts to mere physical cycles pulses or oscillations that we count as the units of time the years for instance but they are passing He has also uncovered Einstein s undoubted snub to 4 D geometry

When Doctors Become Patients Robert Klitzman,2007-11-30 For many doctors their role as powerful healer precludes thoughts of ever getting sick themselves When they do it initiates a profound shift of awareness not only in their sense of their selves which is invariably bound up with the invincible doctor role but in the way that they view their patients and the doctor patient relationship While some books have been written from first person perspectives on doctors who get sick by Oliver Sacks among them and TV shows like House touch on the topic never has there been a systematic integrated look at what the experience is like for doctors who get sick and what it can teach us about our current health care system and more broadly the experience of becoming ill The psychiatrist Robert Klitzman here weaves together gripping first person accounts of the experience of doctors who fall ill and see the other side of the coin as a patient The accounts reveal how dramatic this transformation can be a spiritual journey for some a radical change of identity for others and for some a new way of looking at the risks and benefits of treatment options For most however it forever changes the way they treat their own patients These questions are important not just on a human interest level but for what they teach us about medicine in America today While medical technology advances the health care system itself has become more complex and frustrating and physician patient trust is at an all time low The experiences offered here are unique resource that point the way to a more humane future
