(Chapter 5) (Work Energy and Power) (Exercises) (Class 11)

Question 5.22:

A person trying to lose weight (dieter) lifts a 10 kg mass, one thousand times, to a height of 0.5 m each time. Assume that the potential energy lost each time she lowers the mass is dissipated. **(a)** How much work does she do against the gravitational force? **(b)** Fat supplies 3.8×10^7 J of energy per kilogram which is converted to mechanical energy with a 20% efficiency rate. How much fat will the dieter use up?

Answer 5.22:

(a) Mass of the weight, $m = 10$ kg

Height to which the person lifts the weight, $h = 0.5$ m

Number of times the weight is lifted, $n = 1000$

\therefore Work done against gravitational force:

$$= n(mgh)$$

$$= 1000 \times 10 \times 9.8 \times 0.5$$

$$= 49 \times 10^3 \text{ J} = 49 \text{ KJ}$$

(b) Energy equivalent of 1 kg of fat = 3.8×10^7 J

Efficiency rate = 20%

Mechanical energy supplied by the person's body:

$$= \frac{20}{100} \times 3.8 \times 10^7 \text{ J} = \frac{1}{5} \times 3.8 \times 10^7 \text{ J}$$

Equivalent mass of fat lost by the dieter:

$$= \frac{1}{1/5 \times 3.8 \times 10^7} \times 49 \times 10^3 = \frac{245}{3.8} \times 10^{-4} = 6.45 \times 10^{-2} \text{ kg.}$$

Question 5.23:

A family uses 8 kW of power. **(a)** Direct solar energy is incident on the horizontal surface at an average rate of 200 W per square meter. If 20% of this energy can be converted to useful electrical energy, how large an area is needed to supply 8 kW? **(b)** Compare this area to that of the roof of a typical house.

Answer 5.23:

(a) 200 m²

Power used by the family, $P = 8 \text{ kW} = 8 \times 10^3 \text{ W}$

Solar energy received per square metre = 200 W

Efficiency of conversion from solar to electricity energy = 20 %

Area required to generate the desired electricity = A

As per the information given in the question, we have:

$$8 \times 10^3 = 20\% \times (A \times 200)$$

$$= \frac{20}{100} \times A \times 200$$

$$\therefore A = \frac{8 \times 10^3}{40} = 200 \text{ m}^2$$

(b) The area of a solar plate required to generate 8 kW of electricity is almost equivalent to the area of the roof of a building having dimensions 14 m \times 14 m.

Aly, 2013-10-22 Adsorption Processes for Water Treatment discusses the application of adsorption in water purification The book is comprised of 10 chapters that detail the carbon and resin adsorptive processes for potable water treatment The text first covers the elements of surface chemistry and then proceeds to discussing adsorption models Chapter 3 tackles the kinetics of adsorption while Chapter 4 deals with batch systems and fixed fluid beds Next the book talks about the physical and chemical properties of carbon The next two chapters discuss the adsorption of organic compounds and the removal of inorganic compounds respectively The eighth chapter presents operational pilot plant and case studies Chapter 9 discusses the biological activated carbon treatment of drinking water and Chapter 10 covers the adsorption of macroporous resins The book will be of great use to both researchers and professionals involved in the research and development of water treatment process *A Short Course in General Relativity and Cosmology* Reinhard Hentschke, Christian

Hölbling, 2020-06-23 Unlike most traditional introductory textbooks on relativity and cosmology that answer questions like Does accelerated expansion pull our bodies apart Does the presence of dark matter affect the classical tests of general relativity in a qualitative manner the present text is intended as a foundation enabling students to read and understand the textbooks and many of the scientific papers on the subject And above all the readers are taught and encouraged to do their own calculations check the numbers and answer the above and other questions regarding the most exciting discoveries and theoretical developments in general relativistic cosmology which have occurred since the early 1980s In comparison to these intellectual benefits the text is short In fact its brevity without neglect of scope or mathematical accessibility of key points is rather unique The authors connect the necessary mathematical concepts and their reward i.e. the understanding of an important piece of modern physics along the shortest path The unavoidable mathematical concepts and tools are presented in as straightforward manner as possible Even though the mathematics is not very difficult it certainly is beneficial to know some statistical thermodynamics as well as some quantum mechanics Thus the text is suitable for the upper undergraduate curriculum *Fundamentals of Physics, Volume 1* David Halliday, Robert Resnick, Jearl Walker, 2017-12-11 The first volume

of a two volume text that helps students understand physics concepts and scientific problem solving Volume 1 of the Fundamentals of Physics 11th Edition helps students embark on an understanding of physics This loose leaf text covers a full range of topics including measurement vectors motion and force It also discusses energy rotation equilibrium gravitation and oscillations as well temperature and heat The First and Second Law of Thermodynamics are presented as is the Kinetic Theory of Gases The text problems questions and provided solutions guide students in improving their problem solving skills

Fractional Calculus View of Complexity Bruce J. West, 2016-01-05 This book is not a text devoted to a pedagogical presentation of a specialized topic nor is it a monograph focused on the author's area of research It accomplishes both these things while providing a rationale for why the reader ought to be interested in learning about fractional calculus This book is for researchers who has heard about many

Beyond General Relativity: Critical Perspectives on Gravitation, Curvature, and Wave Propagation in Modern Physics Bernard Lavenda, 2025-05-26 What happens when you push a theory beyond its limits You get a theory like general relativity Although coined by Einstein he would be hard pressed to recognize it Einstein constructed a theory that would pertain to geodesic motion or motion at constant velocity Einstein field equations are equivalent to geometrical optics whose characteristic surfaces are those of electromagnetic and not gravitational radiation In fact gravitational energy is not included in the Einstein energy stress tensor As such it excludes catastrophic phenomena like the merger of black holes or neutron stars In fact black holes are what you get when you extend a non Euclidean metric like the Schwarzschild metric beyond its domain of validity Although there exists no solution to Einstein's field equations for two interacting mass points its

numerical counterpart wants at being able to describe binary black hole collisions Such singularities were pernicious to Einstein's conception of the universe and he built bridges to avoid them Nonlinear equations like Einstein's cannot be approximated by their linearization over large portions of spacetime thus placing in doubt the propagation of gravitational waves Any wave phenomenon traveling at a finite velocity must show signs of aberration No signs of such have ever been observed The field equations do not possess a mechanism for the emission of gravitational waves least of all for their attenuation
