It is appropriate for anyone interested in searching the biological literature from undergraduate students to faculty researchers and librarians. The guide includes a supplementary website dedicated to keeping URLs of electronic and web based resources up to date, a popular feature continued from the third edition.

The Guenons: Diversity and Adaptation in African Monkeys Mary E. Glenn, Marina Cords, 2006-04-11. It has been twelve years since a work relating to the long tailed African monkeys known as the guenons has been published and fifteen years have passed since the last major scientific symposium was held that was solely dedicated to current research on members of this monkey group living in the wild. Since that time new guenon species and subspecies have been discovered previously unstudied guenon species have become the subject of long term research projects and knowledge of the more well known guenon species has greatly increased. This volume presents novel information and keen insight on research previously studied and newly discovered. A wide range of topics related to guenon biology is presented including evolution taxonomy biogeography reproductive physiology social and positional behavior ecology and conservation. Composed of 26 chapters compiled by 47 authors many of whom are young investigators in their field. *The Guenons: Diversity and Adaptation in African Monkeys* provides a valuable resource for researchers and scientists in the fields of anthropology primatology zoology and conservation biology.

Dominance and Aggression in Humans and Other Animals Henry R. Hermann, 2017-01-05. *Dominance and Aggression in Humans and Other Animals: The Great Game of Life* examines human nature and the influence of evolution genetics chemistry nurture and the sociopolitical environment as a way of understanding how and why humans behave in aggressive and dominant ways. The book walks us through aggression in other social species compares and contrasts human behavior to other animals and then explores specific human behaviors like bullying abuse territoriality murder and war. The book examines both individual and group aggression in different environments including work school and the home. It explores common stressors triggering aggressive behaviors and how individual personalities can be vulnerable to or resistant to these stressors. The book closes with an exploration of the cumulative impact of human aggression and dominance on the natural world. Reviews the influence of evolution genetics biochemistry and nurture on aggression. Explores aggression in multiple species including insects fish reptiles birds and mammals. Compares human and animal aggressive and dominant behavior. Examines bullying abuse territoriality murder and war. Includes nonaggressive behavior in displays of respect and tolerance. Highlights aggression triggers from drugs to stress. Discusses individual and group behavior including organizations and nations. Probes dominance and aggression in religion and politics. Translates the impact of human behavior over time on the natural world.

Shadows of Existence Matthew A. Bille, 2006. The age of zoological discovery has not passed. Every year spectacular and exciting new species are being located and classified adding to our knowledge of the animal kingdom. New whales deer snakes sharks and birds are just some of the creatures we have learned about in the past decade. Moreover the seas and forests continue to

conceal unsolved mysteries of zoology Are there undiscovered big cats and unclassified apes hidden in the world's forests Do large animals of unknown type lurk in deep lakes or in the oceans The discoveries rediscovers controversies and mysteries of modern zoology are collected here in *Shadows of Existence* a thoroughly researched and up to date guide to the wonders of nature

Race and the Scottish Enlightenment Linda Andersson Burnett, Bruce Buchan, 2025-08-19 How colonialism shaped the Scottish Enlightenment's conception of race and humanity In the decades after 1750 an increasing number of former medical students from the University of Edinburgh construed humanity as a subject of both intellectual curiosity and colonial interest They drew on a shared educational background blending medicine with natural history and moral philosophy in a range of encounters with non European and Indigenous peoples across the globe whom they began to classify as races Focusing on a surprising number of these understudied students this book reveals the gradual predominance of race in Scottish Enlightenment thought Teaching provided a toolbox of concepts and theories for students who went on to careers as military and naval surgeons colonial administrators and natural historians While some such as Mungo Park who traveled in Africa are well known many others such as the long term residents in the Russian Empire Matthew Guthrie and his wife Maria Guthrie or the Caribbean botanist Alexander Anderson are less remembered Among this group were those such as the Pacific traveler Archibald Menzies and the circumnavigator of Australia Robert Brown who are known primarily as botanists rather than as ethnographers Together they formed a global network of colonial travelers and natural historians sharing a common educational background and a growing interest in race

Species, Species Concepts and Primate Evolution William H. Kimbel, Lawrence B. Martin, 2013-12-18 A world of categories devoid of spirit waits for life to return Saul Bellow Humboldt's Gift The stock in trade of communicating hypotheses about the historical path of evolution is a graphical representation called a phylogenetic tree In most such graphics pairs of branches diverge from other branches successively marching across abstract time toward the present To each branch is tied a tag with a name a binominal symbol that functions as does the name given to an individual human being On phylogenetic trees the names symbolize species What exactly do these names signify What kind of information is communicated when we claim to have knowledge of the following types *Tetodonius mathewzi* was ancestral to *Pseudotetodonius ambiguus* The sample of fossils attributed to *Homo habilis* is too variable to contain only one species Interbreeding populations of savanna baboons all belong to *Papio anubis* *Hylobates lar* and *H. pileatus* interbreed in zones of geographic overlap While there is nearly universal agreement that the notion of the species is fundamental to our understanding of how evolution works there is a very wide range of opinion on the conceptual content and meaning of such particular statements regarding species This is because oddly enough evolutionary biologists are quite far from agreement on what a species is how it attains this status and what role it plays in evolution over the long term
