

7. FOR MOVEMENT AND MAINTENANCE

7-1 HOW TO REMOVE AND INSTALL THE PANEL ASSEMBLY

Removal procedure

- ① Remove the 2 screws which fix the panel assembly.
- ② Remove the panel assembly. Be sure to remove its bottom end first.

Installation procedure

Install the panel assembly following the removal procedure 1 and 2 (described above) in reverse. After having attached the panel assembly, be sure to press the position as indicated by the arrows in order to attach the assembly completely to the unit.

7-2 PUMPING DOWN

When replacing or disposing of the air conditioner, pump-down the system following the procedure below so that no refrigerant is released into the atmosphere.

- ① Connect the gauge manifold valve to the service port of the stop valve on the gas pipe side of the outdoor unit.
- ② Fully close the stop valve on the liquid pipe side of the outdoor unit.
- ③ Close the stop valve on the gas pipe side of the outdoor unit almost completely so that it can be easily closed fully when the pressure gauge shows -0.101 MPa (Gauge) (0 kgf/cm²).
- ④ Start the EMERGENCY COOLING OPERATION. To start the EMERGENCY OPERATION in COOL MODE, disconnect the power supply plug and/or turn off the breaker. After 15 seconds, connect the power supply plug and/or turn on the breaker, and then press the EMERGENCY OPERATION switch once. (The EMERGENCY COOLING OPERATION can be performed continuously for up to 30 minutes.)
- ⑤ Fully close the stop valve on the gas pipe side of the outdoor unit when the pressure gauge shows 0.05 to 0 MPa (Gauge) (approx. 0.5 to 0 kgf/cm²).
- ⑥ Stop the EMERGENCY COOLING OPERATION. Press the EMERGENCY OPERATION switch twice to stop the operation.

7-3 REMOVING THE INDOOR UNIT

Remove the bottom of the indoor unit from the installation plate.

When releasing the corner part

Release both left and right bottom corner part of indoor unit and pull it downward and forward as below to release the hooks.

If the above method cannot be used

Remove the panel and insert hexagonal wrenches into the square holes on the left and right as shown in the figure below. Then push them up; the bottom of the indoor unit is lowered and the hooks are released.

7-4 GAS CHARGE

- ① Connect gas cylinder to the service port of stop valve (3-way).
- ② Evacuate air purge of the pipe (or hose) coming from refrigerant gas cylinder.
- ③ Fill up the specified amount of the refrigerant, while operating the air conditioner for cooling.

Note:

In case of adding refrigerant, comply with the quantity specified for the refrigerating cycle.

CAUTION

- Do not discharge the refrigerant into the atmosphere. Take care not to discharge refrigerant into the atmosphere during installation, maintenance, or repairs to the refrigerant circuit.
- When changing the refrigerant system with additional refrigerant, be sure to use liquid refrigerant. Adding gas refrigerant may change the composition of the refrigerant in the system and affect normal operation of the air conditioner. Also, charge the system slowly, otherwise the compressor will be locked.

To maintain the high pressure of the gas cylinder, warm the gas cylinder with warm water (under 40°C) during addition. But never use naked fire or steam.

Noise Control Manual David A. Harris, 2013-03-09 Excessive noise levels are generally acknowledged to have adverse effects on our environment Studies indicate that excessive noise levels can cause fatigue in exposed individuals lower efficiency and productivity impaired speech communication and hearing loss Excessive noise is almost everywhere today in the office in schools hospitals and other institutional facilities in all classes of public buildings and in our factories

INDUSTRIAL NOISE High noise levels in factories can make speech communication in the plant difficult and at times impossible Foremen are often unable to hear warning shouts from co workers The problem of hearing loss due to excessive noise exposure is of particular concern to industry and to the federal government In the early 1970s the United States Congress passed the Occupational Safety and Health Act OSHA which sets criteria for health hazards and established limits for noise exposure of industrial workers The OSHA Noise Standard was amended in 1982 to require audiometric testing of all employees exposed to noise levels of 85 dB or above for eight hours

A NOISE IN COMMERCIAL AND INSTITUTIONAL BUILDINGS While noise levels in offices stores schools and other commercial and institutional buildings seldom reach those encountered in many industrial environments they often reach levels which are distracting to the occupants of such buildings Impairment of speech communication among workers or inversely the lack of speech privacy are both deterrents to efficiency and productivity and are detrimental to the occupants comfort and sense of well being

Mitchell,2009 This report provides an assessment of technology used in manufacturing modular homes in the United States and that used in the German prefabricated wooden home industry It is the first step toward identifying the research needs in automation and manufacturing methods that will facilitate mass customization in the home manufacturing industry Within the United States a relatively low level of technology was found in domestic modular home manufacturers Raw material transportation was mostly manual manually operated saws sized raw materials cranes were used to move subassemblies and modules were pushed by hand or with a battery powered pusher German prefabricated home manufacturers used closed panels to construct walls roofs and floors rather than modular construction Three levels of automation were identified manual semi automated and fully automated Manual production methods were similar to those found in the United States In semi automated factories automated machinery was used but an operator was required to manually load unload and start the machine The fully automated factories had equipment capable of machining and transferring panel components and placing and fastening components together Such investment in automation is risky in the cyclic housing industry The modular factory has elevated homebuilding from a craft to mass production but flexibility is reduced and significant customization is difficult Future research should examine the cost effectiveness of using high levels of automation software and equipment in the U S homebuilding industry and whether it can profitably provide the manufacturing flexibility for mass customization

Alternatively the use of lean manufacturing in modular home factories to realize the same benefits needs to be examined
