Nahum,John W. Melvin,2013-03-09 Writing on accidental injury often seems to occur from one of two perspectives One
perspective is that of those involved in aspects of injury diagnosis and treatment and the other is that of those in the
engineering and biologic sciences who discuss mechanical principles and simulations From our point of view significant
information problems exist at the interface Persons in the business of diagnosis and treatment do not know how to access
use and evaluate theoretical information that does not have obvious practical applications persons on the theoretical side do
not have enough real life field data with which to identify problems or to evaluate solutions The ideal system provides a
constant two way flow of data that permits continuous problem identification and course correction This book attempts to
provide a state of the art look at the applied bio mechanics of accidental injury causation and prevention The authors are
recognized authorities in their specialized fields It is hoped that this book will stimulate more applied research in the field of
accidental injury causation and prevention Alan M Nahum John W Melvin vii Contents Preface vii Contributors xi Chapter 1
