Pillon, 2007-11-28 With mounting pressure to extract petroleum from oil sands and other unconventional sources oil refineries must adapt their processing methods to handle increasingly heavy crude oils Unlike traditional crude oils the properties of heavier crude oils include higher viscosity metal salt and acid content This causes their interfacial properties to deteriorate leading to problems such as sedimentation foaming emulsification rust and corrosion all of which make the manufacture transportation and storage of petroleum products more difficult Interfacial Properties of Petroleum Products examines conventional and non conventional processing techniques for crude oils and documents their effects on the composition and properties of petroleum products at the oil solid oil air oil water and oil metal interfaces Focusing on surface activity the author examines the undesirable effects of processes such as solvent extraction desalting dewaxing catalyst deactivation and hydroprocessing as well as trace element and water contamination With each process the author presents methods for improving interfacial properties including the use of surface active additives demulsifiers antifoaming

Interfacial Properties of Petroleum Products will help engineers design more cost effective and resource efficient processing methods for heavier crude oils based on the properties of the crude oil extracted Political Economy and Contemporary Capitalism Ron Baiman, Heather Boushey, Dawn Saunders, 2000 With contributions by some of the top heterodox economists of our time this book challenges readers to develop critical perspectives on a number of current topics including foreign financial crises health care social security and welfare reform It explores alternative approaches to theoretical method macro and microeconomics international trade and finance economic development and related policy issues **The Monthly Cumulative Book Index** ,1907 **Persistent Stochastic Shocks in a New Keynesian Model with Uncertainty** Tobias Kranz, 2016-09-27 The book introduces the New Keynesian framework historically through a literature overview and through a step by step derivation of a New Keynesian Phillips curve an intertemporal IS curve and a targeting rule for the central bank This basic version is then expanded by introducing cost and demand shocks and uncertainty The latter enters the model via second order Taylor approximation instead of linearization Bringing all equations together results in an equilibrium condition which is simulated with a wide range of parameter values including possible crisis scenarios The author finds that accounting for uncertainty regarding growth and inflation expectations can lead to lower nominal interest rates set by the central bank *The United States Catalog* ,1913 **Advances In Industrial Ergonomics VI** F Aghazadeh, 1994-06-02 Topics Include applications of engineering anthropometry postural strain and discomfort industrial injury prevention manual materials handling and ergonomics of rehabilitation and healthcare systems *The Struggle over the Soul of Economics* Yuval P. Yonay, 1998-05-11 This book provides a surprising answer to two puzzling questions that relate to the very soul of the professional study of economics in the late twentieth century How did the discipline of economics come to be dominated by an approach that is heavily dependent on mathematically derived models And what happened to other approaches to the discipline that were considered to be scientifically viable less than fifty years ago Between the two world wars there were two well accepted schools of thought in economics the neoclassical which emerged in the last third of the nineteenth century and the institutionalist which started with the works of Veblen and Commons at the end of the same century Although the contributions of the institutionalists are nearly forgotten now Yuval Yonay shows that their legacy lingers in the study and practice of economics today By reconsidering their impact and by analyzing the conflicts that arose between neoclassicists and institutionalists Yonay brings to life a hidden chapter in the history of economics The author is a sociologist of science who brings a unique perspective to economic history By utilizing the actor network approach of Bruno Latour and Michel Callon he arrives at a deeper understanding of the nature of the changes that took place in the practice of economics His analysis also illuminates a broader set of issues concerning the nature of scientific practice and the forces behind changes in scientific knowledge *Who Shall Live? Annie M. Brewer, 1979 Evolutionary Perspectives on Environmental Problems Dustin J. Penn, Iver Myrsterud, The twenty first century presents an increasing number of environmental problems including toxic pollution global warming destruction of tropical forests extinction of biological diversity and depletion of natural resources These environmental problems are generally due to human behavior namely over consumption of resources and overpopulation Designing effective policies to address these problems requires a deep understanding of human behavior as well as ecology This in turn requires considerations of human nature and the evolutionary design of the human mind Evolutionary research on human behavior has profound implications for the environmental sciences The aim of this collection is to bring together a variety of chapters that show how and why Part 1 Human Nature and Resource Conservation addresses environmental problems from different evolutionary perspectives Part 2 The Ecological Noble Savage Hypothesis examines the notion that our environmental problems are due to Western culture and that our ancestors and people in indigenous societies lived in harmony with nature until the corrupting influences of Western culture Part 3 The Tragedy of the Commons explores the conservation of common pool or open access natural resources such as fisheries forests grazing lands freshwater and clean air Part 4 The Evolution of Discounting and Conspicuous Consumption looks at the problem of explaining why people are so ecologically short sighted and why people in developed countries consume so many resources Part 5 Overpopulation and Fertility Declines addresses

the evolution of human reproductive decisions Part 6 Biophilia aims to explain why people cherish nature as well as destroy it The goal of this volume is to introduce environmental thinkers to evolutionary perspectives on human behavior and the new interdisciplinary sciences of evolutionary psychology and behavioral ecology This reader aims to help bridge the artificial division between the biological and social sciences and provide a synthesis between evolutionary sciences of human behavior and environmental sciences Dustin J Penn is director Konrad Lorenz Institute Austrian Academy of Sciences Vienna Iver Mysterud is biologist and researcher at the Department of Biology University of Oslo Norway
