Stocken, 1997-05-16 The contributors to this text who are all biochemists who worked during the 1950s and 60s describe what appears to them to be the conceptually significant developments in biochemistry since the mid 1950s and how these were achieved Their aim is to make their subjects intelligible to other scientists not expert in their field **Biological Regulation and Development** Robert Goldberger, 2012-12-06 The motivation for us to produce a treatise on regulation was mainly our conviction that it would be fun and at the same time productive to approach the subject in a way that differs from that of other treatises We had ourselves written reviews for various volumes over the years most of them bringing together all possible facts relevant to

a particular operon virus or biosynthetic system And we were not convinced of the value of such reviews for anyone but the expert in the field reviewed We thought it might be more interesting and more instructive for both author and reader to avoid reviewing topics that anyone scientist might work on but instead to review the various parts of what many different scientists work on Cutting across the traditional boundaries that have separated the subjects in past volumes on regulation is not an easy thing to do not because it is difficult to think of what interesting topics should replace the old ones but because it is difficult to find authors who possess sufficient breadth of knowledge and who are willing to write about areas outside those pursued in their own laboratories For example no one scientist works on suppression per se He may study the structure of suppressor tRNAs in Escherichia coli he may study phenotypic suppression of various characters in drosophila he may study polarity in gene expression and so on

General Biophysics Volume I deals with the theoretical physics underlying biological phenomena and presents some pertinent experimental results It explores the molecular foundations of biophysics the thermodynamics of nonequilibrium systems and membrane transport nerve impulses and mechanochemical processes Comprised of five chapters this volume begins with an overview of molecular biophysics and the concept of molecular recognition followed by a discussion of the interaction between antibodies and antigens the primary processes that determine odor reception and the importance of intercellular interactions in the existence and development of multicellular organisms The next chapters explain how protein biosynthesis is regulated by molecules and how proteins are biosynthesized in eukaryotic cells along with the application of thermodynamics to the analysis of biophysical problems and the coupling of chemical reactions near equilibrium The reader is also introduced to the stability conditions of a steady state the concept of entropy for an open system the thermodynamics of the sodium pump ionic equilibrium between sodium and potassium solutions separated by an active membrane the conformational properties of membranes and the general phenomenological theory of facilitated transport and the role of the carriers The book concludes with a chapter on biological mechanochemical processes and their thermodynamics This book is a valuable resource for physicists and biophysicists graduate and postgraduate students having the necessary knowledge of physics and anyone acquainted with proteins and nucleic acids

In Search of the Physical Basis of Life Gilbert Ling,2012-12-06

It is highly probable that the ability to distinguish between living and nonliving objects was already well developed in early prehuman animals Cognizance of the difference between these two classes of objects long a part of human knowledge led naturally to the division of science into two categories physics and chemistry on the one hand and biology on the other So deep was this belief in the separateness of physics and biology that as late as the early nineteenth century many biologists still believed in vitalism according to which living phenomena fall outside the confines of the laws of physics It was not until the middle of the nineteenth century that Carl Ludwig Hermann von Helmholtz Emil DuBois Reymond and Ernst von Briicke inaugurated a physicochemical approach to physiology in which it was recognized

clearly that one set of laws must govern the properties and behavior of all matter living and nonliving The task of a biologist is like trying to solve a gigantic multidimensional crossword fill in the right physical concepts at the right places The biologist depends on puzzle to the maturation of the science of physics much as the crossword solver depends on a large and correct vocabulary The solver of crossword puzzles needs not just a good vocabulary but a special vocabulary Words like inee and oke are vitally useful to him but are not part of the vocabulary of an English professor *Mycobacterial Dormancy,*

Molecules and Cells G. A. Chauvet, 2013-10-22 Theoretical Systems in Biology Hierarchical and Functional Integration Volume I Molecules and Cells covers the molecular and cellular aspects of classical biology The book is comprised of 12 chapters which are organized into three parts Part I covers topics relating to the materials and methods in biological dynamics such as macromolecular components and interactions chemistry of cells and biological dynamics Part II deals with the molecular organization of living matter this part covers the organization of biological systems and the relationship between evolution and physiology Part III talks about issues concerning the cellular organization of living matter such as regulation of cell function cell growth and cell division The book will be of great use to biologists concerned with the theoretical systems in biology specifically in cells and molecules Computer Aided Process and Product Engineering

(CAPE) Luis Puigjaner, Georges Heyen, 2007-01-02 Computer aided process engineering CAPE tools have been very successfully used in process design and product engineering for a long time In particular simulation and modelling tools have enabled engineers to analyse and understand the behaviour of selected processes prior to building actual plants The aim of design or retrofit of chemical processes is to produce profitably products that satisfy the societal needs ensuring safe and reliable operation of each process as well as minimising any effects on the environment This involves the conceptual design or retrofit of plants and processes novel manufacturing approaches process control system design interactions and operability manufacturability environmental and safety issues Backed by current studies this 2 volume set gives a comprehensive survey of the various approaches and latest developments on the use of CAPE in the process industry An invaluable reference to the scientific and industrial community in the field of computer aided process and product engineering Membrane Computing David Corne, Pierluigi Frisco, Gheorghe Păun, Grzegorz Rozenberg, Arto

Salomaa, 2009-01-20 This book constitutes the thoroughly refereed extended postproceedings of the 9th International Workshop on Membrane Computing WMC 2008 held in Edinburgh UK in July 2008 under the auspices of the European Molecular Computing Consortium EMCC and the Molecular Computing Task Force of IEEE Computational Intelligence Society The 22 revised full papers presented together with 5 invited papers went through two rounds of reviewing and

improvement The papers in this volume cover all the main directions of research in membrane computing ranging from theoretical topics in mathematics and computer science to application issues A special attention was paid to the interaction of membrane computing with biology and computer science focusing both on the biological roots of membrane computing on applications of membrane computing in biology and medicine and on possible electronically based implementations
