

Active vs. Passive

Active Euthanasia

- Something is done to intentionally bring about the patient's death
- Patient or someone else can perform or assist
- Not currently legal (except in Oregon and outside the U.S.)
- Seen by some as a morally problematic form of killing

Passive Euthanasia

- Something needed for continued patient survival is intentionally withheld, which facilitates the patient's death via "natural" causes
- Can include non-treatment or withdrawal of nourishment or hydration
- Usually instigated by medical staff
- Currently legal and regarded as acceptable within medicine
- Seen as a less morally problematic omission

Adler, 2020-03-11 Capital punishment serial killings war terrorism abortion honour killings euthanasia suicide bombings war and genocide all involve the taking of life Put most simply all involve killing other people However cultural context heavily influences heavily how people perceive these acts and most people reading this paragraph will likely disagree on the extent to which these count as killing For such an evolved species humans can be violent far beyond the point of humanity Why We Kill examines this violence in its many forms exploring how culture plays a role in people s understanding and definition of violent action From the first chapter which examines conventional homicide to the final chapter s bone chilling account of the Rwandan genocide this fascinating book makes compelling reading Applied Ethics Larry May, 2017-07-05 This best selling text continues to fill an existing gap in the literature taught in applied ethics courses As a growing number of courses that include the perspectives of diverse cultures are being added to the university curriculum texts are needed that represent more multicultural and diverse histories and backgrounds This new edition enhances gender coverage as nearly half of the pieces are now authored by women The new edition also increases the

Geisler,J Moreland,1990-11-09 This work is an introductory treatment of issues and options in social and bioethics which center on the end of life Moreland and Geisler have attempted to simplify and summarize various end of life topics without being simplistic or caricaturing different viewpoints even though the authors own viewpoints are made perfectly clear A comprehensive bibliography glossary and subject and author index make this a valuable textbook as well as a resource for further study The major purpose of this book is to make the reader think more clearly and deeply about the important issues discussed between its covers Beginning the work is an essay that introduces the dilemma of ethical decisions The following chapters separately discuss the situations of abortion infanticide euthanasia suicide capital punishment and war The discussion concludes with a chapter of practical and theoretical guidance for making ethical decisions A glossary subject index author index and selected bibliography for each chapter make this a valuable text This important work will not only appeal to experienced philosophers but also to students of moral philosophy theology and ethics

Causation and Responsibility Michael S. Moore, 2009-01-22 The concept of causation is fundamental to ascribing moral and legal responsibility for events Yet the relationship between causation and responsibility remains unclear What precisely is the connection between the concept of causation used in attributing responsibility and the accounts of causal relations offered in the philosophy of science and metaphysics How much of what we call causal responsibility is in truth defined by non causal factors This book argues that much of the legal doctrine on these questions is confused and incoherent and offers the first comprehensive attempt since Hart and Honor to clarify the philosophical background to the legal and moral debates The book first sets out the place of causation in criminal and tort law and outlines the metaphysics presupposed by the legal doctrine It then analyses the best theoretical accounts of causation in the philosophy of science and metaphysics and using these accounts criticises many of the core legal concepts surrounding causation such as intervening causation foreseeability of harm and complicity It considers and rejects the radical proposals to

eliminate the notion of causation from law by using risk analysis to attribute responsibility The result of the analysis is a powerful argument for revising our understanding of the role played by causation in the attribution of legal and moral responsibility Readings in Christian Ethics David K. Devettere, 2016-05-20 For more than twenty years *Practical Decision Making in Health Care Ethics* has offered scholars and students a highly accessible and teachable alternative to the dominant principle based theories in the field. Raymond J. Devettere's approach is not based on an ethics of abstract obligations and duties but following Aristotle on how to live a fulfilled and happy life. In short, an ethics of personal well being grounded in prudence, the virtue of ethical decision making. New sections added in this revised fourth edition include sequencing whole genomes even those of newborns, the new developments in genetic testing now provided by online commercial companies such as 23andMe, the genetic testing of fetuses by capturing their DNA circulating in the pregnant woman's blood, the Stanford Prison experiment and its relevance to the abuses at the Abu Graib prison, recent breakthroughs in the diagnosis of consciousness disorders such as PVS, the ongoing controversy generated by the NIH study of premature babies at many NICUs throughout the country, a study known as SUPPORT that the OHRP Office of Human Research Protections, an office within the department of HHS, deemed unethical. Devettere updates most chapters. New cases include Marlise Munoz, dead pregnant woman's body kept on life support by a Texas hospital, Jahi McMath, teenager pronounced dead in California but treated as alive in New Jersey, Margot Bentley, nursing home feeding a woman dying of end stage Alzheimer's despite her advance directive that said no nourishment or liquids if she was dying with dementia, Brittany Maynard, dying 29 year old California woman who moved to Oregon to commit suicide with a physician's help, and Samantha Burton, woman with two children who suffered rupture of membranes at 25 weeks and whose physician obtained a court order to keep her at the hospital to make sure she stayed on bed rest. Thoughtfully updated and renewed for a new generation of readers, this classic textbook will be required reading for students and scholars of philosophy and medical ethics.
