Whither Turbulence and Big Data in the 21st Century? Andrew Pollard, Luciano Castillo, Luminata Danaila, Mark Glauser, 2016-08-30 This volume provides a snapshot of the current and future trends in

turbulence research across a range of disciplines It provides an overview of the key challenges that face scientific and engineering communities in the context of huge databases of turbulence information currently being generated yet poorly mined These challenges include coherent structures and their control wall turbulence and control multi scale turbulence the impact of turbulence on energy generation and turbulence data manipulation strategies The motivation for this volume is to assist the reader to make physical sense of these data deluges so as to inform both the research community as well as to advance practical outcomes from what is learned Outcomes presented in this collection provide industry with information that impacts their activities such as minimizing impact of wind farms opportunities for understanding large scale wind events and large eddy simulation of the hydrodynamics of bays and lakes thereby increasing energy efficiencies and minimizing emissions and noise from jet engines Elucidates established contemporary and novel aspects of fluid turbulence a ubiquitous yet poorly understood phenomena Explores computer simulation of turbulence in the context of the emerging unprecedented profusion of experimental data which will need to be stewarded and archived Examines a compendium of problems and issues that investigators can use to help formulate new promising research ideas Makes the case for why funding agencies and scientists around the world need to lead a global effort to establish and steward large stores of turbulence data rather than leaving them to individual researchers

Twenty-Fourth Symposium on Naval Hydrodynamics National Research Council, Office of Naval Research, West Japan Society of Naval Architects, Division on Engineering and Physical Sciences, Naval Studies Board, 2003-11-15 This report is part of a series of reports that summarize this regular event The report discusses research developments in ship design construction and operation in a forum that encouraged both formal and informal discussion of presented papers

Energy Research and Development Administration, 1977 *Proceedings of the 4th Annual International Conference on Material, Machines, and Methods for Sustainable Development (MMMS2024)* Banh Tien Long, Ho Xuan Nang, Pham Thanh Huy, Yun-Hae Kim, Kozo Ishizaki, Kim Hyungsun, Duc-Toan Nguyen, Vu Van Truong, Nguyen Thi Hong Minh, Pham Duc An, 2025-08-02 This book presents selected peer reviewed proceedings of the 4th International Conference on Material Machines and Methods for Sustainable Development MMMS2024 held in the city of Da Nang Vietnam from September 18 to 21 2024 The conference establishes a comprehensive understanding of the key elements that drive sustainable development with a particular focus on materials machinery and methodologies Building on this foundation the conference seeks to provide a holistic approach that guides policymakers industries and researchers in aligning local technological advancements with global sustainable development objectives This alignment is intended to support informed decision making that prioritizes greener solutions particularly in relation to materials machinery and methods The papers presented in Volume 1 of this proceedings collection reflect cutting edge advancements in the fields of materials science and mechanical engineering Contributions from scholars research

institutions and industry experts cover a diverse range of topics including electrodeposition of advanced alloys optimization of 3D printing parameters for enhanced part quality and deep learning models for surface roughness assessment Significant attention is given to material innovations such as platinum doped tin dioxide synthesis as well as advanced modeling techniques for piezoactive composites used in energy harvesting systems In the realm of mechanical engineering several papers explore critical challenges such as the design and analysis of planetary gear systems with brakes the development of non circular gears for electric vehicle gearboxes and the impact of mathematical transformers on predicting the limit strength of composite columns Other contributions address structural responses of hybrid steel fiber reinforced concrete under various conditions and advanced methodologies like using generative design for mechanical products A significant portion of the research emphasizes material modeling eco material technologies and sustainable manufacturing processes with applications ranging from aerospace components to energy efficient ship structures
