

Why Do Scientists Classify?

Classification – grouping/organizing things based on their similarities. Biologists use classification so that organisms are easier to study. Classification also shows relationships between organisms.

The scientific study of how living things are classified is called **taxonomy**.

On your web quest guide, define classification and explain why biologists classify.

Guide, Years 7-8 Nicholas Pefani, 2005 Classifying Science Rick Szostak, 2007-11-03 Classification is the essential first step in science The study of science as well as the practice of science will thus benefit from a detailed classification of different types of science In this book science defined broadly to include the social sciences and humanities is first unpacked into its constituent elements the phenomena studied the data used the theories employed the methods applied and the practices of scientists These five elements are then classified in turn Notably the classifications of both theory types and methods allow the key strengths and weaknesses of different theories and methods to be readily discerned and compared Connections across classifications are explored should certain theories or phenomena be investigated only with certain methods What is the proper function and form of scientific paradigms Are certain common errors and biases in scientific practice associated with particular phenomena data theories or methods The classifications point to several ways of improving both specialized and interdisciplinary research and teaching and especially of enhancing communication across communities of scholars The classifications also support a superior system of document classification that would allow searches by theory and method used as well as causal links investigated *Study Material Based On NCERT Science Class -*
