

PSYCHOLOGICAL TREATMENT/ THERAPIES

Psychotherapy is a form of mental health treatment that involves a collaborative process between a trained therapist and an individual, couple, family, or group. The primary goal of psychotherapy is to help people overcome emotional or psychological difficulties, improve their mental well-being, and enhance their overall quality of life. **It helps in learning more adaptive ways of perceiving, evaluating, and behaving.**

The three types of mental health professionals who most often administer psychological treatment in mental health settings are clinical **psychologists, psychiatrists, and psychiatric social workers**. In addition to their being able to provide psychotherapy, the medical training and licensure qualifications of psychiatrists enable them to prescribe psychoactive medications and also to administer other forms of medical treatment such as electroconvulsive therapy.
