Characterization and Behavior of Interfaces J. David Frost, 2010 Interfaces exist in every geotechnical system in many forms and at multiple scales Although historically they are often considered to be the weak link in a system particularly as the result of a number of unexpected catastrophic failures new insight gained over the past twenty years by researchers around the world has shown that it is possible to select combinations of materials and design an engineered interface so that it is at least as strong as the surrounding materials These new insights have been gained as a result of experimental study numerical modeling and analytical investigation of successful and failed systems While individual technical papers have been presented and or published in various forums and proceedings over the years no technical event has ever been convened for the sole purpose of allowing for exchange of information and ideas pertaining to geotechnical interfaces The research symposium held in September 2008 in Atlanta Georgia USA in conjunction with the Fourth International Symposium on Deformation Characteristics of Geomaterials IS Atlanta 2008 at the Georgia Institute of Technology on The Characterization and Behavior of Interfaces addressed this deficiency and the papers presented at that event are contained in this publication IOS Press is an international science technical and medical publisher of high quality books for academics scientists and professionals in all fields Some of the areas we publish in Biomedicine Oncology Artificial intelligence Databases and information systems Maritime engineering Nanotechnology Geoengineering All aspects of physics E governance E commerce The knowledge economy Urban studies Arms control Understanding and responding to terrorism Medical informatics Computer Sciences
