The engines are fitted with a heat exchanger for thermodynamic, controlled fresh water cooling of the engine block, cylinder heads and exhaust manifold. The exhaust manifold cooling panel is designed so that it also cools the exhaust ports.

The engines are lubricated by means of a pressure lubricating system, where an oil pump supplies lubricating oil to all the lubricating points in the correct quantities at all engine speeds. The pistons in the 70-type engines are

cooled by oil film through special nozzles located in the engine block.

The cover part of the pressure lubricating oil is at a constant level.

The fuel system is well protected from interruptions during running by means of an electric, replaceable fuel filter. On the TAMD60 engines the fuel injection pump is large mounted under the other engine from the pump fitted on a bracket.
