Inland Water Resources and Aquaculture Service, Food and Agriculture Organization of the United Nations, 2003 This publication contains technical guidance on the effective and responsible operation of shrimp hatcheries in Latin America compiled through an extensive consultative process undertaken during 2001-03 including contributions from government designated national coordinators regional and international experts intergovernmental organisations and the private sector This process was carried out through the FAO Regional Technical Cooperation Programme project which involved the participation of 14 countries of the region *Improving Penaeus Monodon Hatchery Practices*, 2007-01-01 The successful farming of tiger shrimp *Penaeus monodon* in India is mainly due to the existence of some 300 hatcheries whose capacity to produce 12 000 million postlarvae PL annually has provided an assured supply of seed However the sustainability of the sector is still hampered by many problems foremost among these being a reliance on wild caught broodstock whose supply is limited both in quantity and in seasonal availability and that are often infected with pathogens The current low

quality of hatchery produced PL due to infection with white spot syndrome virus WSSV and other pathogens entering the hatcheries via infected broodstock contaminated intake water or other sources due to poor hatchery management practices including inadequate biosecurity is a major obstacle to achieving sustainable shrimp aquaculture in India and the Asia Pacific region. Considering the major contribution of the tiger shrimp to global shrimp production and the economic losses resulting from disease outbreaks, it is essential that the shrimp farming sector invest in good management practices for the production of healthy and quality seed. This document reviews the current state of the Indian shrimp hatchery industry and provides detailed guidance and protocols for improving the productivity, health management, biosecurity, and sustainability of the sector. Following a brief review of shrimp hatchery development in India, the major requirements for hatchery production are discussed under the headings: infrastructure, facility maintenance, inlet water quality and treatment, wastewater treatment, biosecurity, standard operating procedures (SOPs), the Hazard Analysis Critical Control Point (HACCP) approach, chemical use during the hatchery production process, and health assessment. Pre-spawning procedures covered include the use of wild, domesticated, and specific pathogen-free (SPF) specific pathogen-resistant (SPR) broodstock, broodstock landing centres, and holding techniques, broodstock selection, transport, utilization, quarantine, health screening, maturation, nutrition, and spawning, egg hatching, nauplius selection, egg nauplius disinfection and washing, and holding, disease testing, and transportation of nauplii. Post-spawning procedures covered include larval rearing unit preparation, larval rearing, health management, larval nutrition, and feed management, important larval diseases, general assessment of larval condition, quality testing, selection of PL for stocking, PL harvest and transportation, nursery rearing, timing of PL stocking, use of multiple species in shrimp hatcheries, and documentation and record keeping. Information on the use of chemicals in shrimp hatcheries and examples of various forms for hatchery record keeping are included as Annexes.

Shrimp infectious myonecrosis strategy manual Food and Agriculture Organization of the United Nations, 2019-09-30. This Shrimp infectious myonecrosis strategy manual provides key information for national policy makers relevant to the development of contingency plans for countries, producers, and other stakeholders with regard to outbreaks of infectious myonecrosis (IMN), a viral disease of farmed marine penaeid shrimp that is listed by the World Organisation for Animal Health (OIE). IMN is a viral disease discovered in 2002 that has caused substantial mortalities in populations of cultured Pacific whiteleg shrimp *Penaeus vannamei*, initially reported in Brazil (2002) and Indonesia (2006) and recently in India (2016) and Malaysia (2018). The purpose of this manual is to provide support for the various components of a national contingency plan. The information provided includes: 1) the nature of IMN, providing a brief review of disease etiology, susceptible species, and global distribution; 2) diagnosis of infection, describing the gross clinical signs of disease, field diagnostic methods, differential and laboratory methods for diagnosis; 3) prevention and treatment, providing information on vaccination and resistance and immunity of the hosts; 4) epidemiology, providing information on IMN's geographic distribution, persistence in the environment, modes of transmission, vectors, and reservoir hosts; factors

influencing disease transmission and expression and impact of the disease 5 principles of control and eradication describing the methods and 6 policy development and implementation summarizing the overall policy IMN specific objectives problems overview of response options strategies for eradication and control capacity building and funding and compensation The Shrimp Book Victoria Alday-Sanz,2010-12-01 A comprehensive source of information on all aspects of shrimp production this reference covers not only the global status of shrimp farming but also examines shrimp anatomy and physiology From nutrition to health management and harvesting issues to biosecurity this well researched volume evaluates existing knowledge proposes new concepts and questions common practices With an extensive review on worldwide production systems this compilation will be highly relevant to research scientists students and shrimp producers World Shrimp Culture: pt.1. **In the Wrong Place - Alien Marine Crustaceans: Distribution, Biology and Impacts** Bella S. Galil, Paul F. Clark, James T. Carlton, 2011-04-01 In *The Wrong Place Alien Marine Crustaceans Distribution Biology And Impacts* provides a unique view into the remarkable story of how shrimps crabs and lobsters and their many relatives have been distributed around the world by human activity and the profound implications of this global reorganization of biodiversity for marine conservation biology. Many crustaceans form the base of marine food chains and are often prominent predators and competitors acting as ecological engineers in marine ecosystems. Commencing in the 1800s global commerce began to move hundreds perhaps thousands of species of marine crustaceans across oceans and between continents both intentionally and unintentionally. This book tells the story of these invasions from Arctic waters to tropical shores highlighting not only the importance and impact of all prominent crustacean invasions in the

world's oceans but also the commercial exploitation of invasive crabs and shrimps. Topics explored for the first time in one volume include the historical roots of man's impact on crustacean biogeography, the global dispersal of crabs, barnacle invasions, insights into the potential scale of tropical invasions, the history of the world's most widely cultured shrimp, the invasive history and management of red king crabs in Norway, Chinese mitten crabs in England, and American blue crabs in Europe, the evolutionary ecology of green crabs, and many other subjects as well, touching upon all ocean shores.
