vector-borne diseases Rubén Bueno-Marí, Ricardo Jiménez-Peydró, It is well known that several climatic environmental and socio demographic changes that have occurred in the last years are some of the most important causes for the emergence resurgence of vector borne diseases worldwide Global change can be defined as the impact of human activity on the fundamental mechanisms of biosphere functioning Therefore global change includes not only climate change but also habitat transformation water cycle modification biodiversity loss synanthropic incursion of alien species into new territories or introduction of new chemicals in nature On this respect some of the effects of global change on vector borne diseases can be currently evaluated Globalization has enabled the movement of parasites viruses and vectors among different countries or even at intercontinental level On this regard it is important to note that the increase of imported malaria cases in different Southern European countries has led to the re appearance of autochthonous cases of disease transmission Moreover the used tire trade together with global warming have facilitated the introduction spread and establishment of potential Dengue tropical vectors such as *Aedes aegypti* or *Aedes albopictus* in temperate areas Consequently recently the first Dengue indigenous cases in the last decades have been reported in different Southern areas of North America and Europe Furthermore habitat modification mainly deforestation and transformation of aquatic environments together with the changes in thermal and rainfall patterns are two of the key factors to explain the increasing incidence of Leishmaniasis and several tick borne diseases The aim of this Research Topic is to cover all related fields with the binomial vector borne diseases global change including basic and applied research approaches to control measures explanations of new theories opinion articles reviews etc To discuss these issues a holistic and integrative point of view is necessary which only would be achieved by the close and active participation of specialists on entomology parasitology virology and epidemiology Our objective is to use a systems approach to the problem of global change and vector borne diseases To achieve this ambitious goal and to comply with a demand of first rate scientific and medical interest we are very keen on asking for the participation of multiple contributors **Baculovirus Expression Protocols** Christopher D. Richardson, 2008-02-02 Baculovirus Expression Protocols offers both industrial and university based researchers a comprehensive comilation of the latest baculovirus techniques along with step by step instructions and time saving techniques The contributors leading authorities

in the field present the assorted expression plasmids currently in use guide the reader through the process of generating and selecting recombinant virus and describe specific examples of recombinant protein production and purification The emphasis is on alternative and simpler screening techniques for the selection of recombinant baculovirus The book also surveys the various insect cell lines currently compatible with the baculovirus system Highlights include production of recombinant virus using linearized DNA and vectors that contain a b galactosidase indicator and a complete list of expression vectors currently available Detailed descriptions for the scale up of protein production using spinner flasks bioreactors and insect larvae are also included Baculovirus Expression Protocols offers both industrial and university based researchers an outstanding collection of reproducible step by step laboratory protocols It will immediately become indispensable for anyone working with baculoviruses and their application in the expression of recombinant proteins in insect cells **Film Reference Guide**

Theory of Bridge Aerodynamics Einar Strømmen, 2006-05-30 This text book is intended for studies in wind engineering with focus on the stochastic theory of wind induced dynamic response calculations for slender bridges or other line like civil engineering type of structures It contains the background assumptions and hypothesis as well as the development of the computational theory that is necessary for the prediction of wind induced fluctuating displacements and cross sectional forces The simple cases of static and quasi static structural response calculations are for the sake of completeness also included The text is at an advanced level in the sense that it requires a fairly comprehensive knowledge of basic structural dynamics particularly of solution procedures in a modal format None of the theory related to the determination of eigen values and the corresponding eigen modes are included in this book i.e. it is taken for granted that the reader is familiar with this part of the theory of structural dynamics Otherwise

the reader will find the necessary subjects covered by e g Clough Penzien 2 and Meirovitch 3 It is also advantageous that the reader has some knowledge of the theory of statistical properties of stationary time series However while the theory of structural dynamics is covered in a good number of text books the theory of time series is not and therefore the book contains most of the necessary treatment of stationary time series chapter 2 The book does not cover special subjects such as rain wind induced cable vibrations
