usable products and services which are capable of accommodating individual user requirements in different contexts of use and independently of location target machine or run time environment In the context of the emerging Information Society universal access becomes predominantly an issue of design pointing to the compelling need for devising systematic and cost effective approaches to designing systems that accommodate the requirements of the widest possible range of end users Recent developments have emphasized the need to consolidate progress by means of establishing a common vocabulary and a code of design practice which addresses the specific challenges posed by universal access Code Yellow United States.
