Patellofemoral Disorders Roland M. Biedert, 2005-07-08 Patellofemoral complaints are a major problem for all those working in sports medicine and orthopaedics The correct diagnosis at an early stage is essential if subsequent treatment is to be successful and secondary complications are to be avoided Written by an internationally known team of experts this book looks at the various diagnostic techniques currently available cites examples of unsuccessful treatments and proposes the most appropriate ones on the proven basis of the latest research The core of the book is the 20 case studies ranging from simple non operative treatment to multi operated patients with salvage procedures The underlying theme of the book is that treatment of patellofemoral problems must in the first instance be somewhat conservative Surgical interventions should be performed in a response to a clear underlying pathology and only after non operative treatment has failed Patellofemoral Disorders is enhanced by the inclusion of some superb specially drawn illustrations and numerous colour photographs in the case studies section , **CT Teaching Manual** Matthias Hofer, 2000 **Medicine Meets Virtual Reality 16** Randy S.

Haluck, Helene M. Hoffman, Greg T. Mogel, Roger Phillips, Richard A. Robb, Kirby G. Vosburgh, 2008-01-15 We humans are tribal grouping ourselves by a multitude of criteria physical intellectual political emotional etc The Internet and its auxiliary technologies have enabled a novel dimension in tribal behavior during our recent past This growing connectivity begs the question will individuals and their communities come together to solve some very urgent global problems At MMVR we explore ways to harness information technology to solve healthcare problems and in the industrialized nations we are making progress In the developing world however things are more challenging Massive urban poverty fuels violence and misery Will global networking bring a convergence of individual and tribal problem solving Recently a barrel shaped water carrier that rolls along the ground was presented improving daily life for many people Also the One Laptop per Child project is a good example of how the industrialized nations can help the developing countries They produce durable and simple laptops which are inexpensive to produce At MMVR we focus on cutting edge medical technology which is generally pretty expensive While the benefits of innovation trickle downward from the privileged few to the broader masses we should expand this trickle into a flood Can breakthrough applications in stimulation visualization robotics and informatics engender tools as ingeniously as the water carrier or laptop With some extra creativity we can design better healthcare for the developing world too
