Advanced Microsystems for Automotive Applications 2006 Jürgen Valldorf, Wolfgang Gessner, 2006-07-31 Looking back 10 years when the International Forum on Advanced Microsystems for Automotive Application AMAA started enormous progress has been made in reducing casualties emissions and in increasing comfort and performance Microsystems in many cases provided the key functions for this progress Although the issues the event concentrated on didn't change significantly safety powertrain comfort etc considerable shifts of technological paradigms and approaches can be stated The future of microsystems will consist of integrated smart systems which are able to diagnose a situation to describe and to qualify it They will be able to identify and mutually address each other They will be predictive and therefore they will be able to decide and help to decide Smart systems will enable the automobile to interact with the environment they will perform multiple tasks and assist a variety of activities Smart systems will be highly reliable often networked and energy autonomous There is a coincidence of the AMAA objectives and those of EPoSS the European Technology Platform on Smart Systems Integration contributing intensively to the development of automotive specific smart systems You will find a series of the EPoSS items in the programme of the 10th AMAA which continues to be a unique exchange forum for companies in the automotive value chain The publication in hand also reflects these issues It is a cut out of new technological priorities in the area of microsystems based smart devices and opens up a mid term perspective of future smart systems applications in automobiles Additional information is available on www.amaa.de

Acoustic Waves Don Dissanayake, 2010-09-28 SAW devices are widely used in multitude of device concepts mainly in MEMS and communication electronics As such SAW based micro sensors actuators and communication electronic devices are well known applications of SAW technology For example SAW based passive micro sensors are capable of measuring physical properties such as temperature pressure variation in chemical properties and SAW based communication devices perform a range of signal processing functions such as delay lines filters resonators pulse compressors and convolvers In recent decades SAW based low powered actuators and

microfluidic devices have significantly added a new dimension to SAW technology This book consists of 20 exciting chapters composed by researchers and engineers active in the field of SAW technology biomedical and other related engineering disciplines The topics range from basic SAW theory materials and phenomena to advanced applications such as sensors actuators and communication systems As such in addition to theoretical analysis and numerical modelling such as Finite Element Modelling FEM and Finite Difference Methods FDM of SAW devices SAW based actuators and micro motors and SAW based micro sensors are some of the exciting applications presented in this book This collection of up to date information and research outcomes on SAW technology will be of great interest not only to all those working in SAW based technology but also to many more who stand to benefit from an insight into the rich opportunities that this technology has to offer especially to develop advanced low powered biomedical implants and passive communication devices **RF**

Modelling and Characterization of Tyre Pressure Sensors and Vehicle Access Systems Brzeska, Malgorzata
