Vector Mechanics for Engineers: Dynamics Ferdinand Beer, Phillip Cornwell, Jr. Johnston, E. Russell, 2012-01-12

Continuing in the spirit of its successful previous editions the tenth edition of Beer Johnston Mazurek and Cornwell's *Vector Mechanics for Engineers* provides conceptually accurate and thorough coverage together with a significant refreshment of the exercise sets and online delivery of homework problems to your students. Nearly forty percent of the problems in the text are changed from the previous edition. The Beer Johnston textbooks introduced significant pedagogical innovations into engineering mechanics teaching. The consistent accurate problem solving methodology gives your students the best opportunity to learn statics and dynamics. At the same time the careful presentation of content unmatched levels of accuracy and attention to detail have made these texts the standard for excellence.

EBOOK: Vector Mechanics for Engineers: Statics (SI units) Ferdinand Beer, E. Johnston, David Mazurek, 2012-10-16

Target Audience This text is designed for the first course in Statics offered in the sophomore year.

Overview The main objective of a first course in mechanics should be to develop in the engineering student the ability to analyze any problem in a simple and logical manner and to apply to its solution a few well understood basic principles. This text is designed to help the instructor achieve this goal. Vector analysis is introduced early in the text and is used in the presentation and discussion of the fundamental principles of mechanics. Vector methods are also used to solve many problems particularly three dimensional problems where these techniques result in a simpler and more concise solution. The emphasis in this text however remains on the correct understanding of the principles of mechanics and on their application to the solution of engineering problems and vector analysis is presented chiefly as a convenient tool. In order to achieve the goal of being able to analyze mechanics problems the text employs the following pedagogical strategy. Practical applications are introduced early. New concepts are introduced simply. Fundamental principles are placed in simple contexts. Students are given extensive practice through sample problems. Special sections entitled *Solving Problems on Your Own* extensive homework problem sets review problems at the end of each chapter and computer problems designed to be solved with computational software. Resources Supporting This Textbook. Instructor's and Solutions Manual features typeset one per page solutions to the end of chapter problems. It also features a number of tables designed to assist instructors in creating a schedule of assignments for their course. The various topics covered in the text have been listed in Table I and a suggested number of periods to be spent on each topic has been indicated. Table II prepares a brief description of all groups of problems. Sample lesson schedules are shown in Tables III, IV and V together with various alternative lists of assigned homework problems.
