Strategies in the drug discovery and development for leishmaniasis: immunomodulators, natural products, synthetic compounds, and drug repositioning Taís Fontoura de Almeida,Edezio

Ferreira Cunha-Junior, Juliana Da Silva Pacheco, Gabriela Santos-Gomes, Joao Luiz Mendes Wanderley, Suzana Passos Chaves, Valter Viana Andrade-Neto, Lucia Helena Pinto da Silva, 2024-05-15 Leishmaniasis are a group of tropical diseases that affect millions of people worldwide. They are considered neglected diseases prevalent in emerging countries in Latin America, West Africa and Southeast Asia and still occurring in Mediterranean countries. There is no human vaccine available to prevent and control the disease infection. For the last 70 years, the available chemotherapy has been constituted by first line pentavalent antimonials and second line drugs amphotericin B, pentamidine, paramomycin and miltefosine. Its route of administration is difficult, the treatment is long and its efficiency varies depending on the parasite species and clinical manifestations, which results in the emergence of resistant cases. Moreover, they present high toxicity to patients and even some less toxic formulations available are still expensive for the poorest countries' vulnerable populations. This often leads to abandonment and failure of treatment. The medical scientific community is facing difficulties to overcome these issues with new suitable therapies and the identification of new drug targets. So it means that efforts to identify new strategies must continue.

Asset management's transition from an art and craft to an industry has inevitably called integrated business models into question, favouring specialisation strategies based on cost optimisation and learning curve objectives. This book connects each of these major categories of techniques and practices to the unifying and seminal conceptual developments of modern portfolio theory. In these bear market times

performance evaluation of portfolio managers is of central focus This book will be one of very few on the market and is by a respected member of the profession Allows the professionals whether managers or investors to take a step back and clearly separate true innovations from mere improvements to well known existing techniques Puts into context the importance of innovations with regard to the fundamental portfolio management questions which are the evolution of the investment management process risk analysis and performance measurement Takes the explicit or implicit assumptions contained in the promoted tools into account and by so doing evaluate the inherent interpretative or practical limits Reprogramming the

Wang,2008-02-04 *Agrobacterium tumefaciens* is a soil bacterium that for more than a century has been known as a pathogen causing the plant crown gall disease Unlike many other pathogens *Agrobacterium* has the ability to deliver DNA to plant cells and permanently alter the plant genome The discovery of this unique feature 30 years ago has provided plant scientists with a powerful tool to genetically transform plants for both basic research purposes and for agricultural development Compared to physical transformation methods such as particle bombardment or electroporation *Agrobacterium* mediated DNA delivery has a number of advantages One of the features is its propensity to generate a single or a low copy number of integrated transgenes with defined ends Integration of a single transgene copy into the plant genome is less likely to trigger gene silencing often associated with multiple gene insertions When the first edition of *Agrobacterium Protocols* was published in 1995 only a handful of plants could be routinely transformed using *Agrobacterium* *Agrobacterium* mediated transformation is now commonly used to introduce DNA into many plant species including monocotyledon crop species that were previously

considered non hosts for Agrobacterium Most remarkable are recent developments indicating that Agrobacterium can also be used to deliver DNA to non plant species including bacteria fungi and even mammalian cells
