collaborating research groups namely researchers in urban design and those on general resilience theory The book systematically deals with the core aspects of urban resilience systems management issues and populations The taxonomy can be broken down into threats systems resilience cycles and recovery types in the context of urban resilience It starts with a discussion of systems resilience models focusing on the central idea that resilience is a moving average of costs a set of trajectories in a two player game paradigm The second section explores management issues including planning operating and emergency response in cities with specific examples such as land use planning and carbon neutral scenarios for urban planning The next section focuses on urban dwellers and specific people related issues in the context of resilience Agent based simulation of behaviour and perception based resilience as well as brand crisis management are representative examples of the topics discussed A further section examines systems like public utilities including managing power supplies cyber security issues and models for pandemics It concludes with a discussion of the future challenges and risks facing complex systems for example in resilient power grids making it essential reading for a wide range of researchers and policymakers

Data Engineering Yupo Chan, John Talburt, Terry M. Talley, 2009-10-15 DATA ENGINEERING Mining Information and Intelligence describes applied research aimed at the task of collecting data and distilling useful information from that data Most of the work presented emanates from research completed through collaborations between Acxiom Corporation and its academic research partners under the aegis of the Acxiom Laboratory for Applied Research ALAR Chapters are roughly ordered to follow the logical sequence of the transformation of data from raw input data streams to refined information Four discrete sections cover Data Integration and Information Quality Grid Computing Data Mining and Visualization Additionally there are exercises at the end of each chapter The primary audience for this book is the broad base of anyone interested in data engineering whether from academia market research firms or business intelligence companies The volume is ideally suited for researchers practitioners and postgraduate students alike With its focus on problems arising from industry rather than a basic research perspective combined with its intelligent organization extensive references and subject and author indices it can serve the academic research and industrial audiences

Climate Change and Policy Gabriele Gramelsberger, Johann Feichter, 2011-03-30 The debate on how mankind should respond to climate change is diverse as the appropriate strategy depends on global as well as local circumstances As scientists are denied the possibility of conducting experiments with the real climate only climate models can give insights into man induced climate change by experimenting with digital climates under varying conditions and by extrapolating past and future states into the future But the nature of models is a purely representational one A model is good if it is believed to represent the relevant processes of a natural system well However a model and its results in particular in the case of climate models which interconnect countless hypotheses is only to some extent testable although an advanced infrastructure of evaluation strategies has been developed involving strategies of model intercomparison ensemble prognoses uncertainty metrics on the system and component levels

The complexity of climate models goes hand in hand with uncertainties but uncertainty is in conflict with socio political expectations However certain predictions belong to the realm of desires and ideals rather than to applied science Today s attempt to define and classify uncertainty in terms of likelihood and confidence reflect this awareness of uncertainty as an integral part of human knowledge in particular on knowledge about possible future developments The contributions in this book give a first hand insight into scientific strategies in dealing with uncertainty by using simulation models and into social political and economical requirements in future projections on climate change Do these strategies and requirements meet each other or fail The debate on how mankind should respond to climate change is diverse as the appropriate strategy depends on global as well as local circumstances As scientists are denied the possibility of conducting experiments with the real climate only climate models can give insights into man induced climate change by experimenting with digital climates under varying conditions and by extrapolating past and future states into the future But the nature of models is a purely representational one A model is good if it is believed to represent the relevant processes of a natural system well However a model and its results in particular in the case of climate models which interconnect countless hypotheses is only to some extent testable although an advanced infrastructure of evaluation strategies has been developed involving strategies of model intercomparison ensemble prognoses uncertainty metrics on the system and component levels The complexity of climate models goes hand in hand with uncertainties but uncertainty is in conflict with socio political expectations However certain predictions belong to the realm of desires and ideals rather than to applied science Today s attempt to define and classify uncertainty in terms of likelihood and confidence reflect this awareness of uncertainty as an integral part of human knowledge in particular on knowledge about possible future developments The contributions in this book give a first hand insight into scientific strategies in dealing with uncertainty by using simulation models and into social political and economical requirements in future projections on climate change Do these strategies and requirements meet each other or fail Gabriele Gramelsberger is Principal Investigator of the Collaborative Research Project is Principal Investigator of the Collaborative Research Project

Democratizing Risk Governance Monica Gattinger, 2023-04-28 This open access book features contributions from a multidisciplinary team of leading and emerging scholars focused on democratization of risk assessment management and communication The volume identifies and sheds light on key risk governance dilemmas related to public trust risk perception and public participation The first part of the book articulates the relationship among science expertise deliberation and public values featuring an in depth analysis of the concept of motivated reasoning and the role of trust values and worldviews in understanding and addressing contemporary controversies over risk decision making The volume s second part features eight case studies from three policy fields energy genomics and public health and a special section dedicated to vaccine decision making for Covid 19 Chapters analyze the level nature and mechanisms of public involvement in risk decision making assessing its contribution to the effectiveness and legitimacy of decisions The case

studies focus predominantly on Canada but they draw on global scholarship and are of direct relevance for scholars and practitioners of risk governance in any country

Routledge Handbook of Environmental Impact Assessment Kevin Hanna, 2022-04-10 Globally environmental impact assessment EIA is one of the most enduring and influential environmental management tools This handbook provides readers with a strong foundation for understanding the practice of EIA by outlining the different types of assessment while also providing a guide to best practice This collection deploys a research and practice based approach to the subject delivering an overview of EIA as an essential and practical tool of environmental protection planning and policy To best understand the most pertinent issues and challenges surrounding EIA today this volume draws together prominent researchers practitioners and young scholars who share their work and knowledge to cover two key parts The first part introduces EIA processes and best practices through analytical and critical chapters on the stages elements of the EIA process and different components and forms of assessment These provide examples that cover a wide range of assessment methods and cross cutting issues including cumulative effects assessment social impact assessment Indigenous led assessment risk assessment climate change and gender based assessment The second part provides jurisdictional reviews of the European Union the US National Environmental Policy Act recent assessment reforms in Canada EIA in developing economies and the EIA context in England By providing a concise outline of the process followed by in depth illustrations of approaches methods and tools and case studies this book will be essential for students scholars and practitioners of environmental impact assessment

Terra-Sorta-Firma Fadi Masoud, 2021-05-15 A critical and interdisciplinary exploration of our world's continuously urbanizing and expanding coastline For centuries cities have grown and expanded onto previously saturated grounds reclaiming land from estuaries marshes mangroves and seabeds While these artificial coastlines are sites of tremendous real estate civic and infrastructural investments they are also the most vulnerable to the effects of climate change Terra Sorta Firma documents the global extent of reclaimed coastal lands and provides a framework for comparison across varying geographies cultures and histories It renders visible the ubiquity and precarity of urban coastal reclamation in an age of increased environmental and economic indeterminacy It challenges designers developers policymakers engineers and urbanists to reconsider the design and construction of land itself and to re imagine this most fundamental of all infrastructures along a gradient of inundation
