

The Vitruvian Man - Scientific Method Activity

Vitruvius, a Renaissance architect, described the dimensions of the human body. They are listed below. His theory was illustrated by the artist and scientist, Leonardo Di Vinci in the year 1490.

Your task is to design an experiment to test one of more of Vitruvius's theories. You need to propose a problem and hypothesis, decide what materials you will need to test your hypothesis, design a procedure, collect data (repeated trials), analyze and graph your data, discuss your data (and any possible sources of error) and draw conclusions. Finally, you will share your information with the class.

Vitruvius's Theories

- From fingertip to fingertip, the span of a person's arms is equal to his/her height.
- From the roots of the hair to the bottom of the chin is the tenth of a person's height
- From the bottom of the chin to the top of the head is one eighth of a person's height
- The distance from the bottom of the chin to the nose and from the roots of the hair to the eyebrows should be equal, each comprising $\frac{1}{3}$ the length of the face.
- From the bottom of the knee to the bottom of the foot is equal to $\frac{1}{4}$ of a person's height.
- The distance from the outer edge of one shoulder to the outer edge of the opposite shoulder is equal to $\frac{1}{2}$ of a person's height.

The Architect ,1884 **Cognitive Risk** James Bone,Jessie H Lee,2023-04-18 Cognitive Risk is a book about the least understood but most pervasive risk to mankind human decision making Cognitive risks are subconscious and unconscious influence factors on human decision making heuristics and biases To understand the scope of cognitive risk we look at case studies corporate and organizational failure and the science that explains why we systemically make errors in judgment and repeat the same errors The book takes a multidisciplinary and pedestrian stroll through behavioral science with a light touch using stories to explain why we consistently make cognitive errors that not only increase risks but also simultaneously fail to recognize these errors in ourselves or our organizations This science has deep roots in organizational behavior psychology human factors cognitive science and behavioral science all influenced by classic philosophers and enabled through advanced analytics and artificial intelligence The point of the book is simple Humans persist with bounded rationality but as the speed of information data money and life in general accelerates we will need the right tools to not only keep pace but to survive and thrive In light of all these factors that complicate risk the book offers a foundational solution A cognitive risk framework for enterprise risk management and cyber security There are five pillars in a cognitive risk framework with five levels of maturity yet there is no universally prescribed maturity level It is more a journey of different paths Each organization will pursue its own path but the goal is the same to minimize the errors that could have been avoided We explain why risks are hard to discuss and why we systematically ignore the aggregation of these risks hidden in collective decision making in an organization The cognitive risk framework is a framework designed to explore the two most complex risks organizations face uncertainty and decision making under uncertainty The first pillar is cognitive governance which is a structured approach for institutionalizing rational decision making across the enterprise Each pillar is complimentary and builds on the next in a succession of continuous learning There is no endpoint because the pillars evolve with technology Enterprise risk is a team effort in risk intelligence grounded in a framework for good decision making We close with a call to become designers of risk solutions enabled by the right technology and nurtured by collaboration We hope you enjoy the book with this context
