

SAMPLE PROBLEM 2.1

The two forces **P** and **Q** act on a bolt **A**. Determine their resultant.

SOLUTION

Graphical Solution. A parallelogram with sides equal to **P** and **Q** is drawn to scale. The magnitude and direction of the resultant are measured and found to be

$$R = 98 \text{ N} \quad \alpha = 35^\circ \quad R = 98 \text{ N} \angle 35^\circ \quad \blacktriangleleft$$

The triangle rule may also be used. Forces **P** and **Q** are drawn in tip-to-tail fashion. Again the magnitude and direction of the resultant are measured.

$$R = 98 \text{ N} \quad \alpha = 35^\circ \quad R = 98 \text{ N} \angle 35^\circ \quad \blacktriangleleft$$

Trigonometric Solution. The triangle rule is again used; two sides and the included angle are known. We apply the law of cosines.

$$R^2 = P^2 + Q^2 - 2PQ \cos B$$

$$R^2 = (40 \text{ N})^2 + (60 \text{ N})^2 - 2(40 \text{ N})(60 \text{ N}) \cos 155^\circ$$

$$R = 97.73 \text{ N}$$

Now, applying the law of sines, we write

$$\frac{\sin A}{Q} = \frac{\sin B}{R} \quad \frac{\sin A}{60 \text{ N}} = \frac{\sin 155^\circ}{97.73 \text{ N}} \quad (1)$$

Solving Eq. (1) for $\sin A$, we have

$$\sin A = \frac{(60 \text{ N}) \sin 155^\circ}{97.73 \text{ N}}$$

Using a calculator, we first compute the quotient, then its arc sine, and obtain

$$A = 15.04^\circ \quad \alpha = 20^\circ + A = 35.04^\circ$$

We use 3 significant figures to record the answer (cf. Sec. 1.6):

$$R = 97.7 \text{ N} \angle 35.0^\circ \quad \blacktriangleleft$$

Alternative Trigonometric Solution. We construct the right triangle **BCD** and compute

$$CD = (60 \text{ N}) \sin 25^\circ = 25.36 \text{ N}$$

$$BD = (60 \text{ N}) \cos 25^\circ = 54.38 \text{ N}$$

Then, using triangle **ACD**, we obtain

$$\tan A = \frac{25.36 \text{ N}}{54.38 \text{ N}} \quad A = 15.04^\circ$$

$$R = \frac{25.36}{\sin A} \quad R = 97.73 \text{ N}$$

Again,

$$\alpha = 20^\circ + A = 35.04^\circ \quad R = 97.7 \text{ N} \angle 35.0^\circ \quad \blacktriangleleft$$

Atanackovic, Ardeshir Guran, 2012-12-06 This book is intended to be an introduction to elasticity theory. It is assumed that the student before reading this book has had courses in mechanics statics dynamics and strength of materials mechanics of materials. It is written at a level for undergraduate and beginning graduate engineering students in mechanical civil or aerospace engineering. As a background in mathematics readers are expected to have had courses in advanced calculus linear algebra and differential equations. Our experience in teaching elasticity theory to engineering students leads us to believe that the course must be problem solving oriented. We believe that formulation and solution of the problems is at the heart of elasticity theory. Of course orientation to problem solving philosophy does not exclude the need to study fundamentals. By fundamentals we mean both mechanical concepts such as stress deformation and strain compatibility conditions constitutive relations energy of deformation and mathematical methods such as partial differential equations complex variable and variational methods and numerical techniques. We are aware of many excellent books on elasticity some of which are listed in the References. If we are to state what differentiates our book from other similar texts we could besides the already stated problem solving orientation list the following study of deformations that are not necessarily small selection of problems that we treat and the use of Cartesian tensors only.

Analytical synthesis of linkages is covered and cam design is given a more thorough practical treatment than found in other texts. Jacket

Optimal Control with Aerospace Applications James M Longuski, José J. Guzmán, John E. Prussing, 2013-11-04
 Want to know not just what makes rockets go up but how to do it optimally. Optimal control theory has become such an important field in aerospace engineering that no graduate student or practicing engineer can afford to be without a working knowledge of it. This is the first book that begins from scratch to teach the reader the basic principles of the calculus of variations develop the necessary conditions step by step and introduce the elementary computational techniques of optimal control. This book with problems and an online solution manual provides the graduate level reader with enough introductory knowledge so that he or she can not only read the literature and study the next level textbook but can also apply the theory to find optimal solutions in practice. No more is needed than the usual background of an undergraduate engineering science or mathematics program namely calculus differential equations and numerical integration. Although finding optimal solutions for these problems is a complex process involving the calculus of variations the authors carefully lay out step by step the most important theorems.

and concepts Numerous examples are worked to demonstrate how to apply the theories to everything from classical problems e g crossing a river in minimum time to engineering problems e g minimum fuel launch of a satellite Throughout the book use is made of the time optimal launch of a satellite into orbit as an important case study with detailed analysis of two examples launch from the Moon and launch from Earth For launching into the field of optimal solutions look no further
