thoroughly Researched Content by experts Expanding the Numerical Central Conceptual Structure Laura Christine
Bofferding, 2011 In working with integers students have difficulties that may extend into middle school and even adulthood
However even young children can display insights into negative numbers well before receiving formal instruction Using a pre
test instruction post test design this study explores how 61 first graders reason about negative number properties and
operations and how their understanding changes depending on the instruction they receive Results of the study indicate that
children build on their existing whole number understanding to develop a central conceptual structure for integers
Furthermore the process by which they extend their numerical central conceptual structure differs among students their
initial schemas together with the form of the integer instruction influence how they reason about and solve integer addition
and subtraction problems These results highlight the need to revisit the placement duration and content of integer
