Technical Analysis in Forex and Stock Market Young Ho Seo, This book is another effort for me to introduce the scientific trading for the trading community in Forex and Stock market In my previous five books I provided the details on how technical analysis can predict the market in conjunction with fractal wave However I felt that I could expand this on other technical analysis outside Support Resistance Triangle Pattern Fibonacci Analysis Harmonic Pattern Elliott Wave and X3 Chart Pattern Hence I chosen the supply and demand analysis to accomplish this goal My goal was to provide you more practical trading examples So that you can learn how to make use of the fractal wave in practice for your trading The idea behind the supply and demand analysis starts with understanding the supply and demand curve in Economics However you do not need the deep understanding of the supply demand curve and Economics to use this technique Hence this technical analysis is accessible by anyone In fact the supply and demand analysis shares some common attributes with the volume spread analysis VSA devised by Richard Wyckoff For example the supply and demand analysis uses the price pattern based on the key area in the price analysis The supply and demand analysis is the simple and straightforward price pattern analysis In addition the demand supply zone can be used as the support resistance too We demonstrate how to use the demand supply zone as the support resistance in this book Supply and demand trading does not require any complicated technical indicators or math skills However it purely focuses on the price itself As it is the effective tool for your trading I believe that many people will love to have this technical analysis on their toolbox My latest book tends to be easier to read as I put a lot of effort to find the simplest explanation as possible This book is easy to read too In addition to the supply and demand analysis this book covers

other technical analysis in brief This will help you to compare the supply and demand analysis with other technical analysis However this does not mean that this book is comprehensive to explain all the technical analysis in details If you are looking to explore other technical analysis in details outside the supply and demand analysis then I will recommend reading my previous books In the list below I put the easy to read book on top Try to read the easy to read book first and try to read the harder book later to improve your trading and investment Technical Analysis in Forex and Stock Market Supply and Demand Analysis and Support Resistance Science Of Support Resistance Fibonacci Analysis Harmonic Pattern Elliott Wave and X3 Chart Pattern In Forex and Stock Market Trading Profitable Chart Patterns in Forex and Stock Market Fibonacci Analysis Harmonic Pattern Elliott Wave and X3 Chart Pattern Guide to Precision Harmonic Pattern Trading Mastering Turning Point Strategy for Financial Trading Scientific Guide to Price Action and Pattern Trading Wisdom of Trend Cycle and Fractal Wave Predicting Forex and Stock Market with Fractal Pattern Science of Price and Time

Handbook Y.T. Lo, S. W. Lee, 2013-06-29 Techniques based on the method of modal expansions the Rayleigh Stevenson expansion in inverse powers of the wavelength and also the method of moments solution of integral equations are essentially restricted to the analysis of electromagnetic radiating structures which are small in terms of the wavelength It therefore becomes necessary to employ approximations based on high frequency techniques for performing an efficient analysis of electromagnetic radiating systems that are large in terms of the wavelength One of the most versatile and useful high frequency techniques is the geometrical theory of diffraction GTD which was developed around 1951 by J B Keller 1 2 3 A class of diffracted rays are introduced systematically in the GTD via a generalization of the concepts of classical geometrical optics GO According to the GTD these diffracted rays exist in addition to the usual incident reflected and transmitted rays of GO The diffracted rays in the GTD originate from certain localized regions on the surface of a radiating structure such as at discontinuities in the geometrical and electrical properties of a surface and at points of grazing incidence on a smooth convex surface as illustrated in Fig 1 In particular the diffracted rays can enter into the GO shadow as well as the lit regions Consequently the diffracted rays entirely account for the fields in the shadow region where the GO rays cannot exist
