Technical Manual on Respiration Chamber Designs Cesar Pinares, Garry Waghorn, 2014      **Technical Manual on Respiration Chamber Designs** Cesar Pinares, Garry Waghorn, 2014      *Improving Characterization of Anthropogenic Methane Emissions in the United States* National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Board on Energy and Environmental Systems, Board on Earth Sciences and Resources, Board on Agriculture and Natural Resources, Board on Atmospheric Sciences and Climate, Committee on Anthropogenic Methane Emissions in the United States: Improving Measurement, Monitoring, Presentation of Results, and Development of Inventories, 2018-07-25 Understanding quantifying and tracking atmospheric methane and emissions is essential for addressing concerns and informing decisions that affect the climate economy and human health and safety Atmospheric methane is a potent greenhouse gas GHG that contributes to global warming While carbon dioxide is by far the dominant cause of the rise in global average temperatures methane also plays a significant role because it absorbs more energy per unit mass than carbon dioxide does giving it a disproportionately large effect on global radiative forcing In addition to contributing to climate change methane also affects human health as a precursor to ozone pollution in the lower atmosphere *Improving Characterization of Anthropogenic Methane Emissions in the United States* summarizes the current state of understanding of methane emissions sources and the measurement approaches and evaluates opportunities for methodological and inventory development improvements This report will inform future research agendas of various U S agencies including NOAA the EPA the DOE NASA the U S Department of Agriculture USDA and the National Science Foundation NSF      **Principles of Animal Nutrition** Guoyao Wu, 2017-11-22 Animals are biological transformers of dietary matter and energy to produce high quality foods and wools for human consumption and use Mammals birds fish and shrimp require nutrients to survive grow develop and reproduce As an interesting dynamic and challenging discipline in biological sciences animal nutrition spans an immense range from chemistry biochemistry anatomy and physiology to reproduction immunology pathology and cell biology Thus nutrition is a foundational subject in livestock poultry and fish production as well as the rearing and health of companion animals This book entitled *Principles of Animal Nutrition* consists of 13 chapters Recent advances in biochemistry physiology and anatomy provide the foundation to understand how nutrients are utilized by ruminants and non ruminants The text begins with an overview of the physiological and biochemical bases of animal nutrition followed by a detailed description of chemical properties of carbohydrates lipids protein and amino acids It advances to the coverage of the digestion absorption transport and metabolism of macronutrients energy vitamins and minerals in animals To integrate the basic knowledge of nutrition with practical animal feeding the book continues with discussion on nutritional requirements of animals for maintenance and production as well as the regulation of food intake by animals Finally the book closes with feed additives including those used to enhance animal growth and survival improve feed efficiency for protein

production and replace feed antibiotics While the classical and modern concepts of animal nutrition are emphasized throughout the book every effort has been made to include the most recent progress in this ever expanding field so that readers in various biological disciplines can integrate biochemistry and physiology with nutrition health and disease in mammals birds and other animal species e g fish and shrimp All chapters clearly provide the essential literature related to the principles of animal nutrition which should be useful for academic researchers practitioners beginners and government policy makers This book is an excellent reference for professionals and a comprehensive textbook for senior undergraduate and graduate students in animal science biochemistry biomedicine biology food science nutrition veterinary medicine and related fields

*Indirect calorimetry* Walter Gerrits, Etienne Labussière, 2023-08-07 The use of indirect calorimetry to measure the heat production of men and animals has increased rapidly since the pioneering work of Lavoisier Measurement of the consumption of oxygen and production of carbon dioxide are the basis for the measurement of heat production Today applications of indirect calorimetry are available in many species Combining these measurements with accurate climate control recording of physical activity and feed intake use of stable isotopes and sophisticated modelling techniques allow scientists to make progress in various research areas This book provides a scientific basis for indirect calorimetry dealing with smart ways to design calorimeters gas measurements and computational techniques to deal with complex data Novel techniques allow the connection between short term changes in energy expenditure protein turnover and substrate oxidation e g using stable isotopes Various applications of indirect calorimetry are addressed including heat production measurements in growing animals hatching eggs companion animals and in animals housed under heat stress conditions In addition various ways of measuring methane emissions are discussed This book is intended for scientists working or interested in calorimetry or metabolism research or people designing calorimetry systems opening their eyes for applications they did not yet think of

**Energy and protein metabolism and nutrition in sustainable animal production** James W. Oltjen, E.

Kebreab, Hélène Lapierre, 2013-11-04 As world population increases demand for food and particularly animal products is expected to grow substantially Because of limited area for expansion of animal agriculture and growing consumer concern for the environmental impact of animal production gains in animal efficiency will have to be part of the solution This book addresses key issues of how energy and protein are utilized and interact in farm animals from the molecular to the whole animal and even to the herd or group level of organization It contains state of the art research and reviews on several topics of nutrient utilization and metabolism from top scientists worldwide Key issues addressed include energy protein interactions methodology such as in vitro and in vivo techniques regulation including pre natal programming and endocrine regulation modeling and systems biology including a tribute to the late Professor R Lee Baldwin of the University of California Davis a leader in the field products and health of animals tissue metabolism and environmental sustainability in agriculture This book is a valuable resource for researchers students policy makers producers and industry professionals believing that a better

understanding of metabolism and nutrition of farm animals is part of the solution      **Methane emissions in livestock and rice systems** Food and Agriculture Organization of the United Nations,2023-09-25 Addressing methane emissions from livestock and rice systems is vital for promoting sustainable agriculture and mitigating climate change This FAO report comprehensively addresses methane emissions in agriculture and their impact on global greenhouse gas levels By analysing sources sinks quantification methods and mitigation strategies this publication highlights challenges and opportunities to reduce methane emissions from livestock and rice production systems      Rumen microbiome dynamics and their implications in health and environment Robert W Li,Christina D. Moon,Diego P. Morgavi,2023-07-06      **Impact of Climate Change on Water Resources in Agriculture** Cornelio Alberto Zolin,Renato de A. R. Rodrigues,2015-07-24 Climate change and its impact on water resources in agriculture pose one of the biggest challenges for food energy fiber and water security worldwide and as a consequence for society This book presents a multidisciplinary approach towards climate change and water resources in agriculture and provides a comprehensive perspective about the core      **Methods for Measuring Greenhouse Gas Balances and Evaluating Mitigation Options in Smallholder Agriculture** Todd S. Rosenstock,Mariana C. Rufino,Klaus Butterbach-Bahl,Lini Wollenberg,Meryl Richards,2016-08-23 This book provides standards and guidelines for quantifying greenhouse gas emissions and removals in smallholder agricultural systems and comparing options for climate change mitigation based on emission reductions and livelihood trade offs Globally agriculture is directly responsible for about 11% of annual greenhouse gas GHG emissions and induces an additional 17% through land use change mostly in developing countries Farms in the developing countries of sub Saharan Africa and Asia are predominately managed by smallholders with 80% of land holdings smaller than ten hectares However little to no information exists on greenhouse gas emissions and mitigation potentials in smallholder agriculture Greenhouse gas measurements in agriculture are expensive time consuming and error prone challenges only exacerbated by the heterogeneity of smallholder systems and landscapes Concerns over methodological rigor measurement costs and the diversity of approaches coupled with the demand for robust information suggest it is germane for the scientific community to establish standards of measurements for quantifying GHG emissions from smallholder agriculture Standard guidelines for use by scientists development organizations will help generate reliable data on emissions baselines and allow rigorous comparisons of mitigation options The guidelines described in this book developed by the CGIAR Research Program on Climate Change Agriculture and Food Security CCAFS and partners are intended to inform anyone conducting field measurements of agricultural greenhouse gas sources and sinks especially to develop IPCC Tier 2 emission factors or to compare mitigation options in smallholder systems      Soil Carbon Dynamics Werner L. Kutsch,Michael Bahn,Andreas Heinemeyer,2010-01-07 Carbon stored in soils represents the largest terrestrial carbon pool and factors affecting this will be vital in the understanding of future atmospheric CO<sub>2</sub> concentrations This book provides an integrated view on measuring and

modeling soil carbon dynamics Based on a broad range of in depth contributions by leading scientists it gives an overview of current research concepts developments and outlooks and introduces cutting edge methodologies ranging from questions of appropriate measurement design to the potential application of stable isotopes and molecular tools It includes a standardised soil CO<sub>2</sub> efflux protocol aimed at data consistency and inter site comparability and thus underpins a regional and global understanding of soil carbon dynamics This book provides an important reference work for students and scientists interested in many aspects of soil ecology and biogeochemical cycles policy makers carbon traders and others concerned with the global carbon cycle

Soil Respiration and the Environment Luo Yiqi,Xuhui Zhou,2010-07-20 The global environment is constantly changing and our planet is getting warmer at an unprecedented rate The study of the carbon cycle and soil respiration is a very active area of research internationally because of its relationship to climate change It is crucial for our understanding of ecosystem functions from plot levels to global scales Although a great deal of literature on soil respiration has been accumulated in the past several years the material has not yet been synthesized into one place until now This book synthesizes the already published research findings and presents the fundamentals of this subject Including information on global carbon cycling climate changes ecosystem productivity crop production and soil fertility this book will be of interest to scientists researchers and students across many disciplines A key reference for the scientific community on global climate change ecosystem studies and soil ecology Describes the myriad ways that soils respire and how this activity influences the environment Covers a breadth of topics ranging from methodology to comparative analyses of different ecosystem types The first existing treatise on the subject

Natural Compounds/Products and Livestock Productivity: Enhancing Antioxidant Levels, Gut Health, Mitigating Greenhouse Gas Emissions, and Disease Control Moyosore Joseph Adegbeye,Valiollah Palangi,Sadarman Sadarman ,Abdelfattah Z. M. Salem,2025-09-26 Livestock productivity is crucial for agricultural sustainability and food security facing the dual challenges of enhancing production while reducing environmental impacts and safeguarding animal welfare The exploration of natural compounds from plants and other organic sources has emerged as a promising avenue to bolster livestock production Natural compounds are increasingly recognized for their potential to improve antioxidant defenses promote gut health mitigate greenhouse gas emissions and prevent diseases The transition towards utilizing natural compounds reflects a broader shift toward sustainable livestock practices that address both productivity enhancements and critical environmental and health issues This Research Topic aims to assemble pioneering research on the diverse array of natural compounds applicable in livestock environments With a focus on microbial agents herbal extracts spices and other organic materials this collection explores their impact on boosting productivity enhancing antioxidant capacity and managing gut microbiology Recent studies underscore the benefits of integrating specific natural compounds into animal feed which notably boosts antioxidant levels thereby enhancing animal health and resistance to oxidative stress Additionally the use of probiotics and prebiotics is gaining traction for improving gut health and nutrient

uptake crucial for overall livestock productivity and welfare Moreover some natural compounds have been shown to effectively reduce methane outputs from livestock thus contributing significantly to environmental conservation efforts

*Functioning and Management of European Beech Ecosystems* Rainer Brumme,Partap K. Khanna,2009-08-07 Temperate forests cover large areas of Europe and perform a number of important functions such as the regulation of energy and matter production of wood and other resources and conservation of biodiversity and habitats they also have special significance in social and cultural contexts Initiated in 1960s the first International Biological Program IBP focused on the biological basis of productivity and human welfare As the German contribution to the IBP ecosystem research has been carried out since 1966 in the Solling area Ellenberg H Ecological Studies 2 1971 an upland region in Northwest Germany This study provided clear evidence that the stability of forest ecosystems was threatened by the high inputs of atmospheric pollutants This promoted many interdisciplinary research programs which were coordinated by Prof Dr Bernhard Ulrich and the Forest Ecosystems Research Center of the University of Göttingen This involved in addition to the Solling site the establishment of two other sites for long term monitoring of ecosystem processes The two contrasting sites were established in 1980 at Gottinger Wald on base rich calcareous soil and in 1989 at Zierenberg on volcanic soil These projects were funded initially by the Federal Ministry of Research and Technology BMBF as interdisciplinary projects under the titles Conditions of Stability of Forest

Ecosystems 1989 1993 and Dynamics of Forest Ecosystems 1993 1998 The primary goal of these studies was to quantify the ecological condition of forests in a changing environment and element fluxes      **Scientific and Technical Aerospace Reports** ,1980      Feeding Strategies to Improve Sustainability and Welfare in Animal Production Fulvia Bovera,Giovanni Piccolo,2021-04-23 This book contains the scientific contributions published within the Animals topical collection Feeding Strategies to Improve Sustainability and Welfare in Animal Production Originally a Special Issue it has turned into a permanent collection with its first article being published in July 2019 and more than 30 published articles a year later evidence of the great interest from the scientific community regarding the topics addressed The articles which are grouped by species poultry ruminants pigs etc and by topic deal with a wide range of arguments that first of all highlight the extraordinary complexity and diversity that exists in the animal production sector and then the great influence that nutrition and feeding can have in terms of optimizing the use of environmental resources and improving the welfare of farmed animals In addition all this is closely connected with the urgent need to safeguard the resources of the planet on which we live
