Schlichting, 2009-07-24 Seminar paper from the year 2008 in the subject Business economics Investment and Finance grade 1.0 University of Applied Sciences Essen language English abstract The price movements of stocks are the result of complex interdependencies due to a vast number of influencing factors such as fundamental and psychological factors are expressed in the expectations and the behavior of the stock market participants To cope with this complexity and to derive an applicable asset strategy analysts distinguish particularly between two dominant analysis methods in practice the Fundamental and the Technical Analysis which have recently been supplemented by the approach of Behavioral Finance With reference to a strict interpretation of the theoretical assumptions of the Fundamental as well as the Technical Analysis these two concepts are mutually exclusive As a result of this there are a vast number of analysts who either acknowledge the Fundamental Analysis while denying the Technical Analysis and vice versa The Fundamentals criticize that the technical approach has a lack in academic foundation and is therefore similar to a kind of reading tea leaves whereas the Technicals are convinced that the Fundamental Analysis is not able to generate an advantage by analyzing the fundamental value

drivers of a stock because those are already reflected by the current market prices In practice the Fundamental Analysis seems to have its weaknesses particularly during extreme market phases e g during the New Economy bubble at the end of the nineties in which the psychology of the market participants gains in impact At the same time the fundamental aspects are seemingly neglected Furthermore the fundamental approach seems to have improvement capabilities particularly in terms of timing Psychological aspects of the market participants are at least indirectly included within the Technical Analysis which could be particularly used for timing decisions as well Nevertheless it has its weaknesses too e g it does not provide clearly defined interpretation rules for its various numbers of chart patterns and technical indicators Behavioral Finance seems to have its existence authority in practice as well due to decisions in stock markets made by human beings who do not always behave total rationally All these aspects lead to the master question if the two alternative analysis methods Technical Analysis and Behavioral Finance can deliver any useable supplements towards the Fundamental Analysis in terms of their practical application

practically examined in a second step A broad empirical study using the example of the DAX performance index analyzes the predictive capabilities of the three analysis concepts By evaluating the theoretical as well as the practical synthesis capabilities a general conclusion is drawn about the synthesis capabilities

Behavioral Finance Rolf J. Daxhammer, Mate Facsar, Zsolt Alexander Papp, 2023-01-30 Over the last 50 years neoclassical financial theory has been dominating our perception of what is happening in financial markets It has spurred numerous valuable theories and concepts all based on the concept of Homo Economicus the strictly rational economic man However humans do not always act in a strictly rational manner For students and practitioners alike our book aims at opening the door to another perspective on financial markets a

behavioral perspective based on a Homo Oeconomicus Humanus This agent acts with limited rationality when making decisions He she uses heuristics and shortcuts and is prone to the influence of emotions This sounds familiar in real life and can be transferred to what happens in financial markets too
