as how to efficiently transition from flow chart intensive knowledge representation to a knowledge based system The results of reengineering the legacy trouble shooting procedures provides at least the following benefits 1 replacing fault trees with knowledge based reasoning about faults related to symptoms 2 providing the capability to dynamically relate faults to symptoms 3 equipping the ability to use historical maintenance data to continuously improve maintenance capability 4 providing more user friendly interactive electronic technical manuals and 5 providing the ability to house expert diagnostics information in a form that becomes usable and available to novice technicians
