Technology Supported Innovations in School Education Pedro Isaias, Demetrios G. Sampson, Dirk Ifenthaler,2020-10-09 This volume provides a comprehensive and contemporary depiction of the swift evolution of learning

technologies and the innovations that derive from their deployment in school education. It comprises case studies research focused on emergent technologies and experiments with existing tools in a wide range of scenarios. The studies included in this volume explore the conceptual and practical aspects of technologies that are used to support learning with a multidisciplinary approach that encompasses all levels of education. The three sections of this volume emphasise the use of digital technologies from the viewpoint of different fields of expertise, explore multiple educational settings where technology was implemented to support the various stages of the learning process and underline strategies, tools and technologies that play a crucial role in the professional development of teachers.

Posthumanism and the Massive Open Online Course

Jeremy Knox, 2016-01-29. Posthumanism and the Massive Open Online Course critiques the problematic reliance on humanism that pervades online education and the MOOC and explores theoretical frameworks that look beyond these limitations. While MOOCs, massive open online courses, have attracted significant academic and media attention, critical analyses of their development have been rare. Following an overview of MOOCs and their corporate means of promotion, this book unravels the tendencies in research and theory that continue to adopt normative views of user access, participation and educational space in order to offer alternatives to the dominant understandings of community and authenticity in education.

Is Technology Good for Education? Neil Selwyn, 2016-06-07. Digital technologies are a key feature of contemporary education. Schools, colleges and universities operate along high-tech lines, while alternate forms of online education have emerged to challenge the dominance of traditional institutions. According to many experts, the rapid digitization of education over the past ten years has undoubtedly been a good thing. *Is Technology Good For Education* offers a critical counterpoint to this received wisdom, challenging some of the central ways in which digital technology is presumed to be positively affecting education. Instead, Neil Selwyn considers what is being lost as digital technologies become ever more integral to education provision and engagement. Crucially, he questions the values, agendas and interests that stand to gain most from the rise of digital education. This concise up-to-the-minute analysis concludes by considering alternate approaches that might be capable of rescuing and perhaps revitalizing the ideals of public education while not denying the possibilities of digital technology altogether.

Iran, Israel, and the United States Ofira Seliktar, Farhad Rezaei, 2018-06-20. This book analyzes the process of evaluating Iran's nuclear project and the efforts to roll it back, resulting in the 2015 nuclear agreement known as the Joint Comprehensive Plan of Action (JCPOA). Despite its aura of scientific exactitude, nuclear intelligence is complex and susceptible to methodological disagreements and political bias at the international oversight level, the International Atomic Energy Agency (IAEA) and within the countries involved in the rollback project: Israel and the United States. To highlight both the technological problems of assessing compliance and the politicization, each chapter in the book uses a real-time comparison of the nuclear developments in Iran and the perception of Israel and the United States. This methodology yielded some significant results. Essentially, two camps had formed in each country: those who were pushing for an agreement with Iran and

those who opposed it The Israeli intelligence agencies the Mossad and the Military Intelligence as well as the highly secretive Israeli Atomic Energy Commission IAEC which advised them considered the program to be weak and slow moving The right wing government of Benjamin Netanyahu suggested that Iran was steps away from the point of no return making it an existential threat to Israel A virtually identical split emerged in Washington While the intelligence community and the advising scientists from the National Nuclear Laboratories considered Iran progress to be relatively modest the Republicans and the Israel lobby the Jewish organizations and the Christian Zionists warned of the imminent danger of a nuclear Iran With the Obama administration pushing for the JCPOA a fierce debate took place in Congress The Israeli intelligence and military chiefs led by the Mossad chief Meir Dagan which had previously blocked Netanyahu from a preemptive action quietly supported the agreement In Washington the Israel lobby and the Republicans helped by Netanyahu mounted an all out effort to defeat the deal in Congress The pro deal coalition fought back by mobilizing the scientific community military and intelligence officials the business lobby and grassroots Democrats The JCPOA represents the first successful effort of peaceful counterproliferation At the same excessive politicization has clouded its legitimacy and cast doubt about its future

Nanotechnology and Ethical Governance in the European Union and China Sally Dalton-Brown, 2015-06-03 This book addresses questions surrounding the feasibility of a global approach to ethical governance of science and technology The emergence and rapid spread of nanotechnology offers a test case for how the world might act when confronted with a technology that could transform the global economy and provide solutions to issues such as pollution while potentially creating new environmental and health risks The author compares ethical issues identified by stakeholders in China and the EU about the rapid introduction of this potentially transformative technology a fitting framework for an exploration of global agency The study explores the discourse ethics and participatory Technology Assessment pTA inspired by the work of Jürgen Habermas to argue that different views can be universally recognized and agreed upon perhaps within an ideal global community of communication The book offers a developed discourse model utilizing virtue ethics as well as the work of Taylor Beck Korsgaard and others on identity formation as a way forward in the context of global ethics The author seeks to develop new vocabularies of comparison to discover shared aspects of identity and to achieve hopefully an intercultural personhood that may lead to a global ethics The book offers a useful guide for researchers on methods for advancing societal understanding of science and technology The author addresses a broad audience from philosophers ethicists and scientists to the interested general reader For the layperson one chapter surveys nanoissues as depicted in fiction and another offers a view of how an ordinary citizen can act as a global agent of change in ethics
