High-Conductivity Channels in Space Victor Apollonov, 2018-11-03 This book discusses the physics of conductive channel development in space air and vacuums and summarizes the attempts to create super long conductive channels to study the upper atmosphere and to complete specific tasks related to energy transmission from the space to earth with high voltage high repetition rate electrical sources Conductive channels are produced by the laser jet engine vehicle propulsion under the influence of powerful high repetition rate pulse periodic laser radiation by CO₂ laser solid state Nd YAG HF DF laser systems generated with each pulse of the powerful laser conductive dust plasma The book also presents the experimental and theoretical results of conductive canal modeling the laser jet engine vehicle Impulsar which can reach the lower layers of the ionosphere in several hundred seconds Further the book explores the development of lightning protection systems The so called long laser spark is generated to provide the conditions for connecting a thunderstorm cloud with a grounded metal rod i.e. a classical lightning rod Such conductivity channels can be used for energy transmission overvoltage protection systems transport of charged particle beams and plasma antennas It provides the theoretical and experimental basis of high repetition rate P-P mode of operation for high power lasers COIL HF DF CO₂ Nd YAG It describes high efficiency and excellent beam quality disk lasers used for numerous applications including surface treatment of dielectric materials in microelectronics cutting drilling welding polishing and cleaning of the surface and other technological operations Lastly it investigates how megawatt mono module disk lasers could be used to solve various problems small satellites launched by lasers formation of super long conducting channels in space and atmosphere cleaning of the near earth space from the space debris and related applications *Circuit Cellar Ink*, 1997 *Compact Plasma and Focused Ion Beams* Sudeep Bhattacharjee, 2013-12-12 Recent research has brought the application of microwaves from the classical fields of heating communication and generation of plasma discharges into the generation of compact plasmas that can be used for applications such as FIB and small plasma thrusters However these new applications

bring with them a new set of challenges With coverage ranging from the basics to new and emerging applications Compact Plasma and Focused Ion Beams discusses how compact high density microwave plasmas with dimensions smaller than the geometrical cutoff dimension can be generated and utilized for providing focused ion beams of various elements Starting with the fundamentals of the cutoff problem for wave propagation in waveguides and plasma diagnostics the author goes on to explain in detail the plasma production by microwaves in a compact geometry and narrow tubes He then thoroughly discusses wave interaction with bounded plasmas and provides a deeper understanding of the physics The book concludes with an up to date account of recent research on pulsed microwaves and the application of compact microwave plasmas for multi element FIB It provides a consolidated and unified description of the emerging areas in plasma science and technology utilizing wave based plasma sources based on the author s own work and experience The book will be useful not only to established researchers in this area but will also serve as an excellent introduction to those interested in applying these ideas to various current and new applications
