manufacturing healthcare services retail or other industries If you have a process this approach will help The result is 30% to 50% improvement in first time quality customer lead time capital efficiency labor productivity and floorspace that could add up to millions of dollars saved per year More important it will increase both employee and customer satisfaction The book details a case study from a manufacturing standpoint starting with a tangible example to reinforce the 6CON model This is the first book written from this viewpoint connecting a realistic transformation with the detailed technical challenges as well as the engagement of the stakeholders each with their own bias Key points and must do actions are sprinkled throughout the case study to reinforce learning from the specific to the general In this study an empowered working team is charged with developing a new production line for a critical new product As the story unfolds they create an improved process that saves 5 6 million 10x payback on upfront resource investment over the short life cycle of the product as well as other measurable benefits in quality ergonomics and delivery To an even greater benefit they establish a new way of working that can be applied to all future process creation activities Some organizations have tried their version of Lean process design following a formula or cookie cutter approach But true Lean process design goes well beyond forcing concepts and slogans into every situation It is purposeful scientific and adaptable because every situation starts with a unique current state In addition Lean process design must include both the technical and social aspects as they are essential to sustaining and improving any system Observing the recurring problem of reworking processes that were newly launched brought the authors to the conclusion that a practical book focused on introducing the critical frames of Lean process creation was needed This book enables readers to consider the details within each frame that must be addressed to create a Lean process No slogans no absolutes Real thinking is required This type of thinking is best learned from an example so the authors provide this case study to demonstrate the thinking that should be applied to any process High volume or low simple or complex mix manufacturing or service transactional the framing and thinking works Along with the thinking readers are enabled to derive their own future states This is demonstrated in the story that surrounds the case study

Hitler's Northern War Adam R. A. Claassen, 2001 Adolf Hitler had high hopes for his conquest of Norway which held both great symbolic and great strategic value for the Fuhrer Despite early successes however his ambitious northern campaign foundered and ultimately failed Adam Claassen for the first time reveals the full story of this neglected episode and shows how it helped doom the Third Reich to defeat Hitler and Raeder the chief of the German navy were determined to take and keep Norway By doing so they hoped to preempt Allied attempts to outflank Germany protect sea lanes for German ships access precious Scandinavian minerals for war production and provide a launchpad for Luftwaffe and naval operations against Great Britain Beyond those strategic objectives Hitler also envisioned Norway as part of a pan Nordic stronghold a centerpiece of his new world order But as Claassen shows Hitler's grand expectations were never realized Gring's Luftwaffe was the vital spearhead in the invasion of Norway which marked a number of wartime firsts Among other things it involved the first large scale aerial operations over sea rather than land the first time operational objectives and logistical needs were fulfilled by air power and the first deployment of paratroopers Although it got off to a promising start the German effort particularly against British and arctic convoys was greatly hampered by flawed strategic thinking interservice rivalries between the Luftwaffe and navy the failure to develop a long range heavy bomber the diversion of planes and personnel to shore up the German war effort elsewhere and the northern theater's harsh climate and terrain Claassen's study covers every aspect of this ill fated campaign from the 1940 invasion until war's end and shows how it was eventually relegated to a backwater status as Germany fought to survive in an increasingly unwinnable war His compelling account sharpens our picture of the German air force and widens our understanding of the Third Reich's way of war
