Naval Observatory from the layers of geological deep time in an Arizona canyon to Albert Einstein's apartment in Switzerland. Along the way he talks to scientists and scholars from California to New York from Toronto to Oxford. He speaks with anthropologists and historians about our deep desire to track time's cycles; he talks to psychologists and neuroscientists about the mysteries of memory; he quizzes astronomers about the beginning and end of time. Not to mention our latest theories about time travel and the paradoxes it seems to entail. We meet great minds from Aristotle to Kant from Newton to Einstein and we hear from today's most profound thinkers: Roger Penrose, Paul Davies, Julian Barbour, David Deutsch, Lee Smolin and many more. As usual, Dan Falk's style combines exhaustive research with a lively, accessible and often humorous style, making *In Search of Time* a delightful tour through a most curious dimension. *The End of the Timeless God* R. T. Mullins, 2016-01-07. The claim that God is timeless has been the majority view throughout church history. However, it is not obvious that divine timelessness is compatible with fundamental Christian doctrines such as creation and incarnation. Theologians have long been aware of the conflict between divine timelessness and Christian doctrine, and various solutions to these conflicts have been developed. In contemporary thought, it is widely agreed that new theories on the nature of time can further help solve these conflicts. Do these solutions actually solve the conflict? Can the Christian God be timeless? *The End of the Timeless God* sets forth a thorough investigation into the Christian understanding of God and the God-world relationship. It argues that the Christian God cannot be timeless. [Handbook of Whiteheadian Process Thought](#) Michel Weber, 2013-04-30. Gathering 115 entries written by 101 internationally renowned experts in their fields, the *Handbook of Whiteheadian Process Thought* aims at canvassing the current state of knowledge in Whiteheadian scholarship and at identifying promising directions for future investigations through internal cross-elucidation and external interdisciplinary development. Two kinds of entries are weaved together in order to interpret Whitehead *secundum* Whitehead and to read him from the vantage point of interdisciplinary and crossdisciplinary research. The thematic entries provide i) a broad contextualisation of the issue at stake; ii) a focus on Whitehead's treatment, if any, or of a possible Whiteheadian treatment of the issue; iii) a history of relevant scholarship; iv) a personal assessment by the Author. The biographical entries provide i) a brief vita of the targeted thinker; ii) a sketch of his/her categories relevant to the Whiteheadian scholarship; iii) a personal assessment of the actual or possible Whiteheadian semantic transfer to or from the thinker. **Mystery Of Time, The: Asymmetry Of Time And Irreversibility In The Natural Processes** Alexander Leonidovich Kuzemsky, 2022-10-14. The book focuses on the study of the temporal behavior of complex many-particle systems. The phenomenon of time and its role in the temporal evolution of complex systems is a remaining mystery. The book presents the necessity of the interdisciplinary point of view regarding the phenomenon of time. The aim of the present study is to summarize and formulate in a concise but clear form the trends and approaches to the concept of time from a broad interdisciplinary perspective, exposing tersely the complementary approaches and theories of time in the context of thermodynamics, statistical physics, cosmology, theory of

information biology and biophysics including the problem of time and aging Various approaches to the problem show that time is an extraordinarily interdisciplinary and multifaceted underlying notion which plays an extremely important role in various natural complex processes **What Makes Time Special?** Craig Callender,2017-06-30 As we navigate through life we instinctively model time as having a flowing present that divides a fixed past from open future This model develops in childhood and is deeply saturated within our language thought and behavior affecting our conceptions of the universe freedom and the self Yet as central as it is to our lives physics seems to have no room for this flowing present What Makes Time Special demonstrates this claim in detail and then turns to two novel positive tasks First by looking at the world sideways in the spatial directions it shows that physics is not spatializing time as is commonly alleged Even relativity theory makes significant distinctions between the spacelike and timelike directions often with surprising consequences Second if the flowing present is an illusion it is a deep one worthy of explanation The author develops a picture whereby the temporal flow arises as an interaction effect between an observer and the physics of the world Using insights from philosophy cognitive science biology psychology and physics the theory claims that the flowing present model of time is the natural reaction to the perceptual and evolutionary challenges thrown at us Modeling time as flowing makes sense even if it misrepresents it

there are common epistemic properties to all the historical sciences that distinguish them from non historical or theoretical sciences The first part of the handbook examines the recent expansion of the scope of the historical sciences in Big History natural history global history and environmental history and older broader concepts of history like universal history and philosophy of history The second part of the handbook addresses the ontology and epistemology of the past including the basic concepts of the historical sciences such as origins the end of history determination and underdetermination contingency and necessity historical predictions and counterfactuals and historical pseudoscience The third part examines the philosophies of the special historical sciences historical linguistics textual criticism geology evolutionary biology systematics archaeology cosmology history of the environment and most significantly their integrations and combinations for example how genetics archaeology and historical linguistics have generated a whole new knowledge of deep human history This collection offers an overview of what the philosophy of the historical sciences is and is becoming for students and experts alike      Catalog of Copyright Entries.
