USA RSFDGrC achieved the status of biennial international conference starting from 2003 in Chongqing China. The theory of rough sets proposed by Zdzisław Pawlak in 1982 is a model of approximate reasoning. The main idea is based on indiscernibility relations that describe indistinguishability of objects. Concepts are represented by proximations. In applications, rough set methodology focuses on approximate representation of knowledge derivable from data. It leads to significant results in many areas such as finance, industry, multimedia, and medicine. The RSFDGrC conferences put an emphasis on connections between rough sets and fuzzy sets, granular computing, and knowledge discovery and data mining both at the level of theoretical foundations and real life applications. In the case of this event, additional effort was made to establish a linkage towards a broader range of applications. We achieved it by including in the conference program the workshops on bioinformatics, security, engineering, and embedded systems, as well as tutorials and sessions related to other application areas.
