Abstract – This research contributes to knowledge on automatic programming (AP) by applying the major three features of the three languages, Java, C++ and JavaScript, to the AP. The authors then present a methodology to program an arbitrary computational object in Java, C++ or JavaScript by utilizing the three languages. A case study shows that this three languages can be applied. This research provides evidence to those who think that all three languages, JavaScript, C++ and Java, can be applied to arbitrary computations of the computer and for supporting knowledge engineering for parameter-constructing objects that they benefit with the computer. <http://www.kyushu-u.ac.jp/~kikuchi/>

The Oxford Handbook of the Development of Play Anthony D. Pellegrini, 2011

The role of play in human development has long been the subject of controversy. Despite being championed by many of the foremost scholars of the twentieth century, play has been dogged by underrepresentation and marginalization in literature across the scientific disciplines. The Oxford Handbook of the Development of Play marks the first attempt to examine the development of children's play through a rigorous and multidisciplinary approach. Comprising chapters from the foremost scholars in psychology, anthropology, and evolutionary biology, this handbook resets the landscape of developmental science and makes a compelling case for the benefits of play. Edited by respected play researcher Anthony D. Pellegrini, The Oxford Handbook of the Development of Play is both a scientific accomplishment and a shot across the bow for parents, educators, and policymakers regarding the importance of children's play in both development and learning.
