The Triumph of Doubt David Michaels, 2020 Opioids Concussions Obesity Climate change America is a country of everyday crises big long spanning problems that persist mostly unregulated despite their toll on the country's health and vitality And for every case of government inaction on one of these issues there is a set of familiar doubtful refrains The science is unclear The data is inconclusive Regulation is unjustified It's a slippery slope Is it *The Triumph of Doubt* traces the ascendance of science for hire in American life and government from its origins in the tobacco industry in the 1950s to its current manifestations across government public policy and even professional sports Well heeled American corporations have long had a financial stake in undermining scientific consensus and manufacturing uncertainty in *The Triumph of Doubt* former Obama and Clinton official David Michaels details how bad science becomes public policy and where it's happening today Amid fraught conversations of alternative facts and truth decay *The Triumph of Doubt* wields its unprecedented access to shine a light on the machinations and scope of manipulated science in American society It is an urgent revelatory work one that promises to reorient conversations around science and the public good for the foreseeable future

The Road Ahead for America's Colleges and Universities Robert B. Archibald, David Henry Feldman, 2017 Archibald and Feldman leading observers of the scene provide an incisive overview of the challenges facing and possibilities for America's universities and colleges in their training future generations

Sustainable Diets Pamela Mason, Tim Lang, 2017-03-27 How can huge populations be fed healthily equitably and affordably while maintaining the ecosystems on which life depends The evidence of diet's impact on public health and the environment has grown in recent decades yet changing food supply consumer habits and economic aspirations proves hard This book explores what is meant by sustainable diets and why this has to be the goal for the Anthropocene the current era in which human activities are driving the mismatch of humans and the planet Food production and consumption are key drivers of transitions already underway yet policy makers hesitate to reshape public eating habits and tackle the unsustainability of the global food system The authors propose a multi criteria approach to sustainable diets giving equal weight to nutrition and public health the environment socio cultural issues food quality economics and governance This six pronged approach to sustainable diets brings order and rationality to what either is seen as too complex to handle or is addressed simplistically and ineffectually

The book provides a major overview of this vibrant issue of interdisciplinary and public interest. It outlines the reasons for concern and how actors throughout the food system—governments, producers, civil society, and consumers—must engage with unsustainable diets.

Food in America Andrew F. Smith, 2017-02-16. This three-volume work examines all facets of the modern U.S. food system, including the nation's most important food and agriculture laws, the political forces that shape modern food policy, and the food production trends that are directly impacting the lives of every American family. Americans are constantly besieged by conflicting messages about food, the environment, and health and nutrition. Are foods with genetically modified ingredients safe? Should we choose locally grown food? Is organic food better than conventional food? Are concentrated animal feed operations destroying the environment? Should food corporations target young children with their advertising and promotional campaigns? This comprehensive three-volume set addresses all of these questions and many more, probing the problems created by the industrial food system, examining conflicting opinions on these complex food controversies, and highlighting the importance of food in our lives and the decisions we make each time we eat. The coverage of each of the many controversial food issues in the set offers perspectives from different sides to encourage readers to examine various viewpoints and make up their own minds.

The first volume, *Food and the Environment*, addresses timely issues such as climate change, food waste, pesticides, and sustainable foods. Volume two, entitled *Food and Health and Nutrition*, addresses subjects like antibiotics, food labeling, and the effects of salt and sugar on our health. The third volume, *Food and the Economy*, tackles topics such as food advertising and marketing, food corporations, genetically modified foods, globalization, and megagrocery chains. Each volume contains several dozen primary documents that include firsthand accounts written by promoters and advertisers, journalists, politicians, and government officials, and supporters and critics of various views related to food and beverages, representing speeches, advertisements, articles, books, portions of major laws, and government documents, to name a few. These documents provide readers with additional resources from which to form informed opinions on food issues.
