Wadi Harun,2019-06-12 The eighth volume in a series of handbooks on graphene research and applications The Handbook of Graphene Volume 8 Technology and Innovations discusses the role of graphene based applications in technological advancements Topics include graphene materials used in circuit board repairs RFID antenna and sensor fabrication and wearable healthcare electronics Chapters present detailed information on modeling methods used in graphene research applications of graphene on silicon photonic integrated circuits the development of graphene for engineering applications and other graphene subjects of interest to scientists chemists and physicists **Nanostructured Materials for**

Biomedical Applications Raji Vijayamma,Nandakumar Kalarikkal,Sabu Thomas,2024-06-18 Nanostructured Materials for Biomedical Applications highlights progress challenges and opportunities in nanomedicine and discusses novel engineering approaches of nanostructured materials that are useful in various biomedical applications The book provides a comprehensive review of the state of the art in bio nanotechnology with an emphasis on diverse biomedical applications such as in drug delivery bioimaging hyperthermia and targeted cancer therapy Users will find this to be a broad introductory reference for anyone new to the field or those who wish to gain a thorough overview of nanostructured materials in the context of biomedical applications The breadth of this book will appeal to an interdisciplinary audience including materials scientists pharmaceutical scientists and biomedical engineers Covers a range of nanomaterial types including metal nanoparticles luminescent nanoparticles cubosomes smart nanostructures and much more Reviews the diverse applications of nanomaterials in biomedicine such as in theranostics biosensing cancer therapy drug delivery and tissue engineering

Provides a concise introductory reference for those new to the fields of bionanomaterials and bio nanotechnology The Urban Ecologies of Divided Cities Amira Osman, John Nagle, Sabyasachi Tripathi, 2023-06-12 The book discusses how division affect the fabric of cities and people s sense of identity and agency and are reflected in physical features architecture and urban planning The question of divided cities represents a complex and multistranded urban Ecology at once both social and spatial it cannot be limited to a single science or discipline such as social or spatial fields This suggests integrated and cross disciplinary understandings as well as integrated or parallel approaches and solutions Urban ecologies of division manifest in multiple forms One of their most palpable expressions is conflict with parallels around the world and often with correlations in the spatial fabric Violence in such contexts is often a surface expression of deeper socio economic or ideological differences Whether as a result of intervention by authority or by dissent between groups a divided city inevitably becomes a place of conflict in various forms and intensity eroding the joy of living and sense of collective belonging to the detriment of all In effect it erodes the collective advantage of being part of a more unified society A city exists in collections of social structures which mutually form a society A divided city implies divided social structures and in consequence a divided society The papers compiled in this book present many case studies of divided cities discussing the different causes of divisions and their effects on societies Some of the causes can be linked to conflicts wars colonialism or legislative political systems In response to the serious challenges resulting from these divisions the book aims to provide opportunities for new approaches and possibilities for new interventions and solutions making it significant to urban planners architects and policymakers

Transforming Universities in South Africa, 2020-08-31 The idea of transformation in higher education underpins all policy documents, academic literature and on-going debates in South Africa. *Transforming Universities in South Africa: Pathways to Higher Education Reform* responds to the pressing need to comprehensively review the post-apartheid experience and assess where South Africa's higher education stands across the continent and globally, particularly within the country's efforts to overcome decades of socio-economic imbalances. It addresses the question of whether South Africa's transformation strategy from apartheid to democracy was simply a symbolic new flag-raising and new anthem singing exercise reflecting a transition akin to those limited decolonization projects elsewhere in the world or whether something more fundamental was possible and was achieved with political and policy implications for other countries in Africa and globally. This volume's ultimate purpose is to provide a basis for imagining new futures in which South Africa's higher education in the context of Africa and the global world takes centre stage.

Polymers and Two-Dimensional Nanocomposites Rotimi Sadiku, Yskandar Hamam, Suprakas Sinha Ray, Oladipo Folorunso, 2024-11-23 *Polymers and Two-Dimensional Nanocomposites* provides a detailed review of recent progress in this important research field. The chapters cover new developments in synthesis, methods, fabrication techniques, sample preparation methods, surface modification, characterization methods of enhancing the properties of these materials and industrial applications in energy, environmental, oil and gas, sensors, corrosion, biomedical and structural applications. The book provides a valuable reference resource for academic and industrial researchers, materials scientists and engineers working in the fields of polymer science and engineering, polymer composites and nanocomposites. Covers recent developments in synthesis, characterization, properties and applications. Discusses new fabrication techniques and how to select the right processing conditions. Systematic presentation of theoretical and experimental investigation of properties for various industrial applications. Attention is given to current challenges and future improvements.

Big Data Applications for Improving Library Services Dhamdhere, Sangeeta Namdev, 2020-09-25 Today libraries must provide various web-based services, social media and internet to patrons in order to adequately support their information needs. In addition to these services, the maintenance of online literature databases, data sets and archives cause librarians to have to handle huge amounts of data each day. Big data can support with quality improvement and problem solving to improve library services and can help librarians to provide up-to-date and innovative real-time services to library users. *Big Data Applications for Improving Library Services* is an essential scholarly publication that examines the implications and applications of big data analytics on services provided by libraries. Highlighting a wide range of topics such

as data analytics mobile technologies and web based services this book is ideal for librarians knowledge managers data scientists data analysts cataloguers academicians IT professionals researchers and students Plant Microbiome: Interactions, Mechanisms of Action, and Applications, Volume II Alok Kumar Srivastava, Prem Lal Kashyap, George Newcombe, Gustavo Santoyo, 2022-06-27 Social and Professional Applications of Actor-Network Theory for Technology Development Tatnall, Arthur, 2012-10-31 The latest advances in technology development have been particularly useful to actor network theory as a structure for much of its research With a socio technical approach to the understanding of information systems and applications the actor network theory aims to bring support for social influence on technological innovations Social and Professional Applications of Actor Network Theory for Technology Development presents a platform for the approaches and implementations on the actor network theory and its relationship with technology development This book provides researchers and practitioners with a better understanding of the usefulness of the social and technical connection *Materials Science and Engineering: Concepts, Methodologies, Tools, and Applications* Management Association, Information Resources, 2017-01-11 The design and study of materials is a pivotal component to new discoveries in the various fields of science and technology By better understanding the components and structures of materials researchers can increase its applications across different industries Materials Science and Engineering Concepts Methodologies Tools and Applications is a compendium of the latest academic material on investigations technologies and techniques pertaining to analyzing the synthesis and design of new materials Through its broad and extensive coverage on a variety of crucial topics such as nanomaterials biomaterials and relevant computational methods this multi volume work is an essential reference source for engineers academics researchers students professionals and practitioners seeking innovative perspectives in the field of materials science and engineering **Two-Dimensional Materials for Environmental Applications** Neeraj Kumar, Rashi Gusain, Suprakas Sinha Ray, 2023-04-28 This book focuses on recent developments in the field of two dimensional nanomaterials for environmental applications Due to their high surface area and tunable surface chemistry two dimensional nanomaterials are currently garnering great interest for environmental remediation applications This book compiles contributed chapters from active international researchers dealing with the development of state of the art two dimensional nanomaterials in environmental applications such as water and wastewater treatment adsorption photocatalysis membrane separation desalination deionization environmental pollutants sensing detection carbon dioxide capture and catalytic conversion microbial treatment and electrochemical remediation Each chapter provides an essential and comprehensive overview of the recent advances in material development and application giving special attention to preparation methods tuning of physiochemical properties surface and interface chemistry structural porosity assemblies integration for fabrication of devices and their relationship with overall efficiency It offers a valuable reference guide for environmental and materials scientists engineers and policymakers working towards environmental sustainability *From*

an Ethic of Sufficiency to its Policy and Practice in Late Capitalism Manu V. Mathai, Sylvia Lorek, Wolfgang Sachs, 2023-12-13
That the notion of sufficiency is essential for a good life is an idea that enjoys support across many ethical philosophical religious and cultural persuasions This notion reasserted itself in the study of sustainability once modern society reluctantly took cognizance of the limited low entropy energy and matter available for human appropriation There is today therefore a general recognition of i e not necessarily wide agreement on the merits of or needs for notions of sufficiency as a species of environmentalism within secular communities In this context a critical question that invites our attention is how to effect sufficiency and in particular of dealing with the daunting challenge of injustice as well as questions of distribution within and between countries that it brings to attention Given sufficiency's original home as it were in tradition the modern world has tended to dismiss it or to plead to individual voluntary simplicity when faced with evidence asserting its necessity Sufficiency is also often written away as a spiritual problem The domain of ascetics and the religious How to habilitate sufficiency in a political economy for the secular modern facing its biggest existential challenge yet in the form of the environmental crisis

Handbook of Composites from Renewable Materials, Nanocomposites Vijay Kumar Thakur, Manju Kumari Thakur, Michael R. Kessler, 2017-04-06 This unique multidisciplinary 8 volume set focuses on the emerging issues concerning synthesis characterization design manufacturing and various other aspects of composite materials from renewable materials and provides a shared platform for both researcher and industry The Handbook of Composites from Renewable Materials comprises a set of 8 individual volumes that brings an interdisciplinary perspective to accomplish a more detailed understanding of the interplay between the synthesis structure characterization processing applications and performance of these advanced materials The Handbook comprises 169 chapters from world renowned experts covering a multitude of natural polymers reinforcement fillers and biodegradable materials Volume 7 is solely focused on the Nanocomposites Science and Fundamentals of renewable materials Some of the important topics include but not limited to Preparation characterization and applications of nanomaterials from renewable resources hydrogels and its nanocomposites from renewable resources preparation of chitin based nanocomposite materials through gelation with ionic liquid starch based bionanocomposites biorenewable nanofiber and nanocrystal investigation of wear characteristics of dental composite reinforced with rice husk derived nanosilica filler particles performance of regenerated cellulose vermiculite nanocomposites fabricated via ionic liquid preparation structure properties and interactions of the PVA cellulose composites green composites with cellulose nanoreinforcements biomass composites from bamboo based micro nanofibers synthesis and medicinal properties of polycarbonates and resins from renewable sources nanostructured polymer composites with modified carbon nanotubes organic inorganic nanocomposites derived from polysaccharides natural polymer based nanocomposites cellulose whisker based green polymer composites poly lactic acid nanocomposites reinforced with different additives nanocrystalline cellulose halloysite based bionanocomposites nanostructured composites based on biodegradable polymers
