Shah,A.B. Pandit,V.S. Moholkar,2012-12-06 The literature on cavitation chemistry is ripe with conjectures possibilities

heuristic arguments and intelligent guesses The chemical effects of cavitation have been explained by means of many theories consisting of empirical constants adjustable parameters and the like The chemists working with cavitation chemistry agree that the phenomenon is very complex and system specific Mathematicians and physicists have offered partial solutions to the observed phenomena on the basis of cavitation parameters whereas chemists have attempted explanations based on the modes of reaction and the detection of intermediate chemical species Nevertheless no one has been able to formulate a unified theme however crude for its effects on the basis of the known parameters such as cavitation and transient chemistry involving extremely high temperatures of nanosecond durations When one surveys the literature on cavitation assisted reactions it is clear that the approach so far has been Edisonian in nature While a large number of reactions have showed either enhanced yields or reduced reaction times many reactions have remained unaffected in the presence of cavitation The success or failure of cavitation reactions ultimately depends on the collapse of the cavity Cavitation chemistry is based on the principles of the formation of small transient cavities their growth and implosion which produce chemical reactions caused by the generation of extreme pressures and temperatures and a high degree of micro turbulence **ICCS21** Antonio J.M.
