Convexity and connectivity of the solution space in machine learning problems Maxime Hardy, 2019-01-24 ScientiaRerum Thesis 2018 This thesis investigates properties of the solution space of the machine learning problem of random pattern classification Such properties as convexity of the space of solutions its connectivity and clusterization are studied Evidence has been provided recently that there exists a universality class for random pattern classification models making it possible to study the properties of the whole set of constraint satisfaction problems using the most simple model the perceptron with spherical constraint it is exactly solvable and exhibits the full stack of characteristic properties of that class In order to obtain statistically representative treatment of the model as opposed to the best worst case scenarios we used the well established methods of theoretical physics of disordered systems a k a spin glasses In terms of that science this model can be interpreted as a random packing problem and demonstrates the phenomenology of slow glassy relaxation and a jamming transition The specific property of that model is that the corresponding constraint satisfaction problems ceases to be convex The non convex domain is explored in detail in this thesis and its structure is presented on a phase diagram Publisher Scientia Rerum academic publishers Paris *Handbook of Polymer Synthesis, Characterization, and Processing* Enrique Saldivar-Guerra, Eduardo Vivaldo-Lima, 2013-02-28 Covering a broad range of polymer science topics Handbook of Polymer Synthesis Characterization and Processing provides polymer industry professionals and researchers in polymer science and technology with a single comprehensive handbook summarizing all aspects involved in the polymer production chain The handbook focuses on industrially important polymers analytical techniques and formulation methods with chapters covering step growth radical and co polymerization crosslinking and grafting reaction engineering advanced technology applications including conjugated dendritic and nanomaterial polymers and emulsions and characterization methods including spectroscopy light scattering and microscopy **Australian national bibliography**, 1961 **Essential University Physics** Richard Wolfson, 2007 Richard Wolfson sEssential University Physics is a concise and progressive calculus based physics textbook that offers clear writing great problems and interesting real life applications At nearly half the length and half the price of other physics texts on the market Essential University Physics is a compelling alternative for professors who want to focus on the fundamentals Doing Physics 1 Mechanics Motion in a Straight Line Motion in Two and Three Dimensions Force and Motion Using Newton s Laws Work Energy and Power Conservation of Energy Gravity Systems of Particles Rotational Motion Rotational Vectors and Angular Momentum Static Equilibrium Part 2 Oscillations Waves and Fluids Oscillatory Motion Wave Motion Fluid Motion Thermodynamics Temperature and Heat The Thermal Behavior of Matter Heat Work and the First Law of Thermodynamics The Second Law of Thermodynamics For all readers interested in calculus based physics The Educational Times, and
