Jackson,2012-12-06 Modern Methods of Plant Analysis When the handbook Modern Methods of Plant Analysis was first introduced in 1954 the considerations were 1 the dependence of scientific progress in biology on the improvement of existing and the introduction of new methods 2 the difficulty in finding many new analytical methods in specialized journals which are normally not accessible to experimental plant biologists 3 the fact that in the methods sections of papers the description of methods is frequently so compact or even sometimes so incomplete that it is difficult to reproduce experiments These considerations still stand today The series was highly successful seven volumes appearing between 1956 and 1964 Since there is still today a demand for the old series the publisher has decided to resume publication of Modern Methods of Plant Analysis It is hoped that the New Series will be just as acceptable to those working in plant sciences and related fields as the early volumes undoubtedly were It is difficult to single out the major reasons for success of any publication but we believe that the methods published in the first series were up to date at the time and presented in a way that made description as applied to plant material complete in itself with little need to consult other publications Contributing authors have attempted to follow these guidelines in this New Series of volumes **Plant Cells Vs Animal Cells** Rebecca Woodbury,Rebecca Woodbury Ph. D.,2020-06-26 In the leveled reader Plant Cells vs Animal Cells fundamental science concepts in biology are explained through simply written text and colorful fun illustrations Young readers will discover that plants and animals have different types of cells Cells are made of atoms and molecules and do different jobs inside living things Both plant cells and animal cells are surrounded by a cell membrane and have organelles which are structures inside cells that do different jobs The nucleus of a cell is the organelle where DNA is made and held DNA is a strand of linked atoms that tell the cell what to do A ribosome is an organelle that makes proteins which are long chains of atoms Proteins do all the work inside a cell cutting joining and moving molecules A mitochondrion is an organelle that makes energy for the cell Plant and animal cells are also different Plant cells have a stiff outer cell wall in addition to a cell membrane Animals cells have only a cell membrane Plant cells have chloroplasts which are organelles that catch sunlight to make food Animal cells do not have chloroplasts and do not make food from sunlight Animals get their food from eating other animals and plants A pronunciation guide of scientific terms is included 24 pages filled with engaging colorful illustrations Reading Level 1 3 Interest Level 2 5 The Biology of Pollen Joseph P.
