Environmental Information in Instructions for Use of Consumer Products Ari Nissinen, 2005-03-11 The European Union has highlighted the issue of environmentally sound use of products in the context of Integrated Product Policy IPP. Accordingly, consumers should have easy access to understandable, relevant, and credible environmental information. Information about product characteristics is available in different forms and sources, but in many cases relevant environmental information is not available on the product itself. The study described in this report was initiated in order to produce information on the state of user instructions regarding environmental information. User manuals of passenger cars and refrigerators were focused on examining the advice which could diminish the harmful environmental effects of the use of these products. Other studied products included such durable products as textiles and furniture as well as such consumables as cleaning chemicals and recyclable paper products. The study raised many ideas about actions that could promote the status and eco development of instructions for use.

Sunstein, 2025-10-14 Best selling author Cass R Sunstein outlines the promise and limits of artificial intelligence Imperfect Oracle is about the promise and limits of artificial intelligence The promise is that in important ways AI is better than we are at making judgments Its limits are evidenced by the fact that AI cannot always make accurate predictions not today not tomorrow and not the day after either Natural intelligence is a marvel but human beings blunder because we are biased We are biased in the sense that our judgments tend to go systematically wrong in predictable ways like a scale that always shows people as heavier than they are or like an archer who always misses the target to the right Biases can lead us to buy products that do us no good or to make foolish investments They can lead us to run unreasonable risks and to refuse to run reasonable risks They can shorten our lives They can make us miserable Biases present one kind of problem noise is another People are noisy not in the sense that we are loud though we might be but in the sense that our judgments show unwanted variability On Monday we might make a very different judgment from the judgment we make on Friday When we are sad we might make a different judgment from the one we would make when we are happy Bias and noise can produce exceedingly serious mistakes AI promises to avoid both bias and noise For institutions that want to avoid mistakes it is now a great boon AI will also help investors who want to make money and consumers who don't want to buy products that they will end up hating Still the world is full of surprises and AI cannot spoil those surprises because some of the most important forms of knowledge involve an appreciation of what we cannot know and why we cannot know it Life would be a lot less fun if we could predict everything **Popular Science** ,1979-12 Popular Science gives our readers the information and tools to improve their technology and their world The core belief that Popular Science and our readers share The future is going to be better and science and technology are the driving forces that will help make it better
