

Statement of requirements that affect the system as a whole, and are not restricted to only a subset of its modules.

B.4. Module Design

Describe the breakdown of the design into functional modules. Each module probably contains both software and hardware.

Then include a section like the following (2.5) for **each module**. Not all of the sub-headings may be relevant for each module.

B.5. Module Requirements: **Module X**

The operational scenarios considered place certain requirements on the **something system**, and on the modules that comprise it.

B.5.1. Functional Requirements

This section describes the functional requirements of **Module X** — those requirements that must be met if the module (and system) is to function correctly.

B.5.1.1. Inputs

Describe each external input, including signal encoding and timing, message encoding and timing, protocols, file formats, protection against input errors, etc., as relevant.

B.5.1.2. Process

Describe the internal signal transformations and/or computer processing functionality required within the module, required performance limits, and error tolerances as appropriate.

B.5.1.3. Outputs

Describe outputs that must be produced for the module to function correctly, including timing, frequency, protocols, etc as relevant.

B.5.1.4. Timing

Any required timing or latency specifications that must be met.

B.5.1.5. Failure modes

Required functionality (if any) in the event of failure of various nominated components.

B.5.2. Non-Functional (Quality of Service) Requirements

Non-functional requirements do not need to be met for the device to have basic function, but are required to provide specific levels of performance or engineering quality.

B.5.2.1. Performance

Requirements such as computational loop time, accuracy, etc.

B.5.2.2. Interfaces

Qualities that are desirable in input and output interfaces, but are not required for functionality.

B.5.2.3. Design Constraints

Practical or commercial considerations, such as programming languages, processor or other hardware, etc.

B.6. Conceptual Design: **Module X**

Now, for **each module**, give the outline of how it will work. In this section it is appropriate to present:

- The rationale for the design decisions that were made — why things were designed the way they were
- block diagrams,
- mathematical models and algorithms,
- data flow diagrams
- state-transition diagrams
- listings of input and output formats
