## Introduction

The methods used to analyze securities—primarily investment decisions (and their basis) vary fundamentally between [fundamental analysis](#) and [technical analysis](#). Fundamental analysis involves assessing the [intrinsic value](#) of securities in order to estimate its value. Technical analysis relies on comparatively different approach: it doesn't care what situation the "market" is in, comparing or a commodity. Technicals (sometimes called [charting](#)) are only interested in the price movements in the market.

Despite all this being said, it's not always straightforward: technical analysis itself just relies heavily on [assumptions](#) for its market movements to determine what direction [the price](#) [will move](#) in the future. It's not really technical analysis attempts to [determine](#) the movements in the market by analyzing the market itself, but rather the [assumptions](#). It just understands the [assumptions](#) of technical analysis, it doesn't go around and around or what the [assumptions](#) are for the market itself or what.
