

## Design

The goal for this design is to design a system that will automate the deployment of SOA components to various environments; development, test, production etc.

### Requirements

The system must be design and implemented on the following business requirements:

- Platform independent
- Independent of existing software installations
- Deploy to multiple environments
- Handle the following components,
  - BPEL
  - ESB
  - Human Workflow
  - Java
  - AIA
- Integrate with a source control system
- Easy to use

#### Platform Independent

The system should run on any platform; Linux, Windows or any other Unix system.

#### Independent of existing software installations

The system should not depend on a particular software installation of a vendor. This means that the system can be installed on any server or workstation in the network infrastructure. The system should be run standalone.

#### Deploy to multiple environments

Every project has multiple environments that implements an application, for example development, test, acceptance and production environment. These are the most common used environments. The OSBS should handle any environment.

#### Handle the following components

OSBS should deploy and undeploy any component in a SOA project; BPEL, ESB, Human workflow. While a project consists also of non SOA components, it should anticipate also on this, like Java or AIA components.

This programme Regulations 3056/73 and 3639/85 has allowed remarkable achievements in a sector where innovation is needed to take up the challenge of producing oil and gas in difficult environments. This report shows the achievements of the Community programme. It gives evidence of the high technical level which has already been
