**New Advances in Building Information Modeling and Engineering Management** María de las Nieves González García, Fernanda Rodrigues, João Santos Baptista, 2023-07-31 This book explores the latest advances in the field of building management. Several chapters use new technologies such as the BIM methodology for collecting life cycle information and managing the maintenance of existing buildings, sharing valid historical and architectural heritage data, energy analysis of building envelopes and planning new buildings or sustainable building practices. In addition, other tools are presented that focus on improving access to BIM information, open source governance, mobile applications to accelerate information transfer, the use of blockchain, lean design methods and open source software to solve critical path problems. Some contributions feature the assessment of occupational risks in construction as it is necessary to plan preventive measures based on risk assessments integrated throughout the construction process, which is another important element for the management of this sector. IAEG/AEG Annual Meeting Proceedings, San Francisco, California, 2018 - Volume 1 Abdul Shakoor, Kerry

Cato, 2018-08-25 This book is one out of six IAEG XIII Congress and AEG 61st Annual Meeting proceeding volumes and deals with topics related to slope stability including case histories, landslide mapping and emerging technologies. The theme of the IAEG/AEG Meeting held in San Francisco from September 17-21, 2018 is Engineering Geology for a Sustainable World. The meeting proceedings analyze the dynamic role of engineering geology in our changing world. The meeting topics and subject areas of the six volumes are Slope Stability, Case Histories, Landslide Mapping, Emerging Technologies, Geotechnical and Environmental Site Characterization, Mining Aggregates, Karst, Dams, Tunnels, Groundwater Resources, Climate Change, Geologic Hazards, Earthquakes, Land Subsidence, Coastal Hazards and Emergency Response and Advances in Engineering Geology, Education, Soil and Rock Properties, Modeling. *The Threefold Logic of Advanced Architecture* Manuel Gausa, Jordi Vivaldi, 2021-04-15 During the last 30 years, Advanced Architecture has consolidated an interactive and informational logic that differs from that of Modernity and Postmodernity. This logic is threefold; it is modulated through three coexisting protocols/modes of action whose peaks of intensity occur in three different decades: Conformative Protocols (1990-2000), Distributive Protocols (2000-2010) and Expansive Protocols (2010-2020). This work proposes a threefold cultural narrative whose interactive and informational logic differs from that of modernity and postmodernity. It positions three different ethos by critically approaching the architectural side of a cultural mutation that has been affecting the Western experimental areas of

knowledge and practice since the end of the last century A transformative process constituted by a constellation of transdisciplinary manifestations accelerations turns shortcuts and clusterizations that by no means can be read under one single epistemological umbrella In this sense rather than approaching the practice of architecture focusing on its disciplinary inner specificity this book approaches the research of experimental architecture focusing on its extra disciplinary entanglements It argues that a vast multiplicity of fields of knowledge participates in a cultural endeavour modulated through three protocols forms of action that singularize three decades Conformative Protocols 1990 2000 Distributive Protocols 2000 2010 and Expansive Protocols 2010 2020 These three periods shouldn't be read as three hermetic and concatenated monades but as three different modulations of the same narrative that is as three overlapping and coexisting systems whose peaks of intensity occur in three different decades However the main purpose of this book is not limited to unveiling the ethos of these three conjugations It also aims at using this framework as a time field a narrative map that moves from the classificatory to the cartographical in order to vectorize the last 30 years of experimental architecture In this sense this book argues that this threefold set of protocols represents the progressive attempt to constitute critical interiorities looking for and produced through interactions that are increasingly more intimate and whose agents are increasingly more diverse A tendency oriented towards the consolidation of an intimacy between strangers that highly resonates with the cultural and technological landscape in which experimental architecture operates
