O'Connor,Charles H Dowding,2021-11-18 GeoMeasurements by Pulsing TDR Cables and Probes examines Time Domain
Reflectometry TDR research and provides information on its use as a robust reliable and economical production tool Common
uses for TDR technology include telecommunications and power industries but the text examines applications such as
measurement of moisture of unsaturated soils detection of fluids for leak and pollution measurement of water levels for
hydrological purposes measurement of water pressures beneath dams and deformation and stability monitoring of mines
slopes and structures Chapters discuss basic physics of signal generation transmission and attenuation along the coaxial
cable probe designs and procedures for calibration as well as the variation in probe responses to changes in water content
and soil mineralogy variations in waveform characteristics associated with cable deformation cable calibration and
installation techniques for metallic cables in rock several cases demonstrating the use of TDR cables in soil as well as
weathered and soft rock a rationale for the use of compliant cable in soil the use of metallic cable MTDR and optical fiber
OTDR to monitor response of structures sensor transducer components connections from the sensors to the TDR pulser
sampler and system control methods available software for transmission and analysis of TDR signatures The diverse interest
and terminology within the TDR community tends to obscure commonalities and the universal physical principles underlying
the technology The authors seek to crystallize the basic principles among the seemingly divergent specialties using TDR
technology in geomaterials By examining varied experiences GeoMeasurements by Pulsing TDR Cables and Probes provides
a synergistic text necessary to unify the field
