Pykh,2013 Social psychological and sociological systems present considerable difficulties for modellers due to their complexity multidimensionality uncertainty and irreducibility The book proposes that response functions MRF be used as a method of constructing purposeful credible and integrated social systems models from data and prior knowledge or information A semi empirical or grey box MRF model may be regarded as a trade off between a knowledge based model and a black box empirical model It may embody all the existing knowledge on the process or a part thereof and in addition it relies on parameterised functions whose parameters are determined from measurements Observations contain hidden information on the processes under consideration and one of the main purposes of the proposed method is to extract and describe these hidden relationships Parameterisation offers ways to couple qualitative with quantitative analysis This combination makes it possible to take into account all the phenomena that are not modelled with the required accuracy

through prior knowledge Although only a simplified picture of the processes is modelled a grey box system model provides some insight into the system processes These processes are featured by chains of causality highlighting stressors and variables responsive to stressors The method of response functions is a nonlinear regression method that implies credible models in the sense that they are identifiable and hopefully explain system output behaviour satisfactorily For case studies the authors have selected the problems usually studied by psychologists and sociologists with statistical procedures such as investigation of variance and discriminant analysis based on the general linear model or one of its multivariate generalisations structural equation models etc disordered eating and obesity subjective well being and alexithymia An accompanying CD ROM contains the demonstration versions of three models that are discussed in the various chapters The Method of Response Functions in Psychology and Sociology is aimed at Mathematical Psychologists Mathematical Sociologists Applied Psychologists Sociologists and Social Practitioners It will also be suitable for use on undergraduate as well as graduate and postgraduate courses specializing in these areas **Scientific and Technical Aerospace Reports** ,1991 <u>Manual for the measurement, monitoring, and reporting of carbon and greenhouse gases in mangroves under restoration</u> Cisneros-de la Cruz, D.J.,Herrera-Silveira, J.A.,Teutli-Hernández, C.,Ramírez-García, S.A.,Moreno-Martínez, A.,Pérez-Martínez, O.,Canul-Cabrera, A.,Mendoza-Martínez, J.,Montero-Muñoz, J.,Paz-Pellat, F.,Roman-Cuesta, R.M.,2022-12-30 *Selected Water Resources Abstracts* ,1989 <u>The Publishers' Trade List Annual</u> ,1918 **Catalog of Copyright Entries, Third Series** Library of Congress.
