

This announcement contains all the requirements for lab reports and lab ethics throughout the semester. Failing to follow the provided instructions will result in deduction of grades and further penalties:

Lab Ethics:

- Submit your report by the beginning of the next lab. Late penalty: 10% per day will be deducted from your report, don't accept lab report 4 days late after due day.
- You have one week to work on your report.

Lab Reports:

1. Abstract:

Briefly discuss what you are going to do in this lab, how do you achieve the goal of this lab, and what results are you expecting from this lab. **No longer than half page.**

2. Introduction Section:

Each time we start performing a new type of testing (compression, bending, ...), the report corresponding to that specific type of test should **contain theoretical background**.

It should contain separate paragraphs about each material type (ex, one paragraph for Aluminum grades, one for Steel grades, ...)

It should contain one finalizing paragraph that states what you are trying to achieve by performing the experiment.

3. Methods Section:

Include a picture of your setup/apparatus/fixtures while your sample is installed prior testing.

Instead of mentioning the dimensions, types, and number of specimens inside your text, you should **create a table** that contains all the information.

4. Results Section:

Include a **comprehensive table** (as shown on sample reports on eLearning), with appropriate units, and **significant figures** (ex, stress-strain, load-displacement, linear fitting of Young's modulus, offset lines for yield points, etc.)

discussed This chapter begins with defining a control system based on which momentum analysis of the flow system is explained The rest of the chapter is allotted to the force acting on a control system the linear momentum equation and the energy equation Chapter 4 also covers the hydraulic grade line and energy grade line experiment The effect of orifice and changing cross sectional area by using Bernoulli s equation is presented in Chapter 4 The application of the siphon is extended from Chapter 4 by applying Bernoulli s equation The last two chapters cover various topics in both internal and external flows which are of great importance in engineering design Chapter 5 deals with internal flow including Reynolds number flow classification flow rate measurement and velocity profile The last experiment in Chapter 5 is devoted to a deep understanding of internal flow concepts in a piping system In this experiment students learn how to measure minor and major head losses as well as the impact of piping materials on the hydrodynamics behavior of the flow Finally open channels weirs specific energy and flow classification hydraulic jump and sluice gate experiments are covered in Chapter 6
