

WHAT IS OCCUPATIONAL THERAPY?

Occupational Therapy (OT) helps children develop the skills they need to engage independently in everyday activities.

Occupational Therapy is a holistic approach that focuses on helping children participate fully in meaningful activities—or “occupations.”

These can include:

Self-care skills: OT's help promote independence in daily life skills such as dressing, bathing, grooming, teeth brushing, toileting, and feeding.

Fine motor skills: OT's often focus on the upper extremity and hand, helping develop fine motor skills. This can include handwriting and coordination.

Visual motor and perceptual skills: OT's can assess and address hand eye coordination and visual perceptual skills (like interpreting what you see) to promote greater success in daily life, sports, and school skills.

Sensory processing: OT's can assess sensory processing challenges and create individualized strategies to help children process sensory information.

Emotional regulation: OT's can help children develop healthy emotional awareness, behavior, and coping skills for improved emotional regulation.
